PREFACE

In recent years the production of the annual Trade of Canada report has been hampered by staff shortages, by technical problems, and by the necessity of concentrating available resources on the task of introducing more modern commodity classifications in trade statistics. In order to restore these reports to their former timeliness it will be necessary to combine issues for several years. Present plans provide for the following:

Volume I, Summary and Analytical Tables:

The present issue, which carries the dating 1959-1960, will be the last issue with the present content. The next issue of this volume will relate especially to the period 1960-1964, and will present a selection of summary and analytical tables designed to bridge the transfer from component material commodity classifications to the new standard-type commodity classifications. This volume is not expected to be available before the end of 1966.

Volume II, Exports:

Issues for 1959-1960 and 1961-1962 have already been published. Both were prepared largely by photo offset printing of tabulator copy, in the same manner as monthly reports. The first of these issues was delayed by design, translation and tabulation problems, since it was the first to be prepared by these processes. The second was delayed by similar problems resulting from the introduction of a new export commodity classification in 1961. The next issue of this volume will relate to the years 1963-1964 and should appear about the end of 1965.

Volume III, Imports:

This volume is also being prepared from tabulator copy, and has likewise suffered from technical problems and classification change problems. An issue for 1959-1960 is largely complete and should appear about September, 1965. The next issue, which will cover the period 1962-1964, will be on the basis of the new commodity classification, and is scheduled to appear about March, 1966. A clean-up issue for the years 1961-1963 on the basis of the old commodity classification should be completed about the middle of 1966.

The data presented in this volume differ in two important respects from those presented in previous issues:

1. On January 1, 1960, important changes were introduced in the coverage of Canadian export and import statistics. These changes include the establishment of a new group of special and non-commercial transactions which are excluded from trade totals. A description of this change in coverage appears in the special note "Changes in Coverage of Trade Statistics" on page 12.
2. A new country classification was introduced for export and import statistics in 1960. A detailed account of the new country classification appears in "New Country Classification for External Trade Statistics" on page 15.

W.E. DUFFETT,
Dominion Statistician.

PRÉFACE

Au cours des dernières années, la publication du rapport annuel sur le commerce du Canada a été entravée par la pénurie de personnel, par des problèmes techniques et par la nécessité d'affecter le personnel disponible à la tâche d'établir des classifications plus récentes de marchandises pour la statistique du commerce. En vue de redonner à ces rapports leur actualité d'autrefois, il faudra combiner les éditions de plusieurs années. Les plans actuels assurent la publication de la matière suivante:

Volume I, tableaux récapitulatifs et analytiques:

La présente édition qui vise l'année 1959-1960 sera la dernière à traiter de la matière actuelle. La prochaine édition de ce volume couvrira la période 1960-1964 et présentera un choix de tableaux récapitulatifs et analytiques destinés à établir un lien entre les anciennes classifications des matières constituantes des marchandises et les nouvelles classifications types des marchandises. On ne prévoit pas que ce volume puisse paraître avant la fin de 1966.

Volume II, exportations:

Les éditions de 1959-1960 et de 1961-1962 ont déjà été publiées. Toutes deux ont été préparées, dans une large mesure, au moyen de l'impression par off-set des photographies des manuscrits des tabulatrices, soit de la même façon que les rapports mensuels. La première de ces éditions a été retardée par des problèmes ayant trait au plan, à la traduction et au calcul, car elle était la première à être préparée suivant ces techniques. La seconde édition a été retardée par des problèmes semblables, découlant de l'adoption d'une nouvelle classification des marchandises d'exportation en 1961. La prochaine édition de ce volume portera sur les années 1963 et 1964 et paraîtra probablement vers la fin de 1965.

Volume III, importations:

Ce volume est également préparé d'après la copie de la tabulatrice et sa publication a aussi été entravée par des difficultés d'ordre technique et par des modifications apportées à la classification des marchandises d'importation. L'édition de 1959-1960 est presque prête et paraîtra probablement vers septembre 1965. La prochaine, qui couvrira la période 1962-1964, se fondera sur la nouvelle classification des marchandises et sera publiée, selon les prévisions, vers mars 1966. Une édition de mise au point des années 1961-1963 et fondée sur l'ancienne classification des marchandises sera terminée vers le milieu de 1966.

Les renseignements donnés dans le présent volume diffèrent de ceux qui ont paru dans les éditions précédentes à deux points de vue importants:

1. Le 1er janvier 1960, on a apporté des modifications considérables à la couverture de la statistique des exportations et des importations canadiennes. Ces modifications comprennent l'établissement d'un nouveau groupe de transactions spéciales, non commerciales qui sont exclues des totaux du commerce. Une description de ces changements paraît dans la note spéciale "Modifications apportées à la couverture de la statistique du commerce", page 12.
2. En 1960, on a adopté une nouvelle classification des pays pour la statistique des exportations et des importations. Un compte rendu détaillé de cette nouvelle classification des pays paraît à la page 15 "Nouvelle classification des pays pour la statistique du commerce extérieur".

Statisticien du Dominion.

EXPLANATORY NOTES

1. **Source of Data:** Statistics of exports and imports are compiled from information appearing on customs entries and invoices, except for exports of electricity. From January 1, 1960, exports of electricity have been compiled from returns submitted by the exporting firms through the National Energy Board to the Dominion Bureau of Statistics.

2. **Time Periods:** Trade statistics for any period include all goods declared on customs entries received at DBS during the calendar period in question and on electricity reports received within twelve working days of the close of the calendar period. Most customs entries reach DBS within a week of the date the goods are cleared, although export entries for some water-borne shipments arrive much later.

3. **Coverage:**

   a. **Domestic Exports:** Statistics of domestic exports include both goods which are wholly produced in Canada and goods previously included in import statistics which have been changed in form by further processing in Canada and then exported.

   b. **Re-exports:** Statistics of re-exports include goods previously included in import statistics which are exported from Canada in the same form as when imported. Minor operations such as sorting or re-packing are not considered as changing the condition of imported goods.

   c. **Imports:** Statistics of imports include substantially all goods which enter Canada and are cleared through customs for domestic sale or use. The series, therefore, includes both goods which are cleared by customs immediately on arrival into the country, and goods cleared from customs warehouses for use in Canada.

   d. **Exclusions:** The following commodity movements are excluded from both export and import statistics (some are recorded separately as Special Transactions – Non-trade): gold and gold products where the value of the gold content is 80% or more of the total value (except for dental gold alloy and a small amount of gold scrap in the form of jewellers' sweepings); current coin; settlers' effects; private donations and gifts; tourist purchases (only those entitled to duty-free entry are excluded from import totals); goods moving to or from Canadian armed forces or diplomats abroad, or to or from the forces of our NATO allies or foreign diplomats in Canada; temporary shipments of goods for exhibition or competition (and film moving for exhibition or processing); bunker supplies and ships' stores sold to foreign vessels or aircraft in Canadian ports, or purchased by Canadian vessels or aircraft abroad; generally, all other temporary and transit movements.

   Import statistics also exclude ships of British construction and registry imported for use in Canada, and ships and aircraft purchased for use as international carriers but not used to carry goods between points in Canada. Export statistics also exclude

NOTES EXPLICATIVES

1. **Source des données:** La statistique des exportations et des importations se fonde sur les renseignements tirés des déclarations et factures douanières, sauf dans le cas des exportations d'électricité. Depuis le 1er janvier 1960, ces dernières sont calculées d'après les questionnaires présentés par les entreprises exportatrices, au Bureau fédéral de la statistique par l'intermédiaire de l'Office national de l'énergie.

2. **Périodes de temps:** La statistique du commerce pour une période quelconque comprend toutes les marchandises déclarées dans les documents douaniers parvenus au B.F.S. durant la période civile observée et dans les rapports sur l'électricité reçus durant les douze derniers jours ouvrables de cette période. La plupart des documents douaniers parviennent au B.F.S. en moins d'une semaine suivant la date où les marchandises sont dédouanées, bien que les déclarations de certaines marchandises expédiées par bateaux soient reçues beaucoup plus tard.

3. **Couverture:**

   a. **Exportations nationales:** La statistique des exportations nationales comprend les marchandises entièrement produites ou fabriquées au Canada de même que les marchandises précédemment comptées dans les importations et que l'on transforme de nouveau au Canada pour fins d'exportation.

   b. **Réexportations:** La statistique des réexportations comprend les marchandises précédemment comptées dans la statistique des importations et qui sont exportées du Canada dans l'état où elles étaient lors de leur importation. Les manipulations secondaires telles que le triage ou le réemballage ne modifient pas l'état des marchandises importées.

   c. **Importations:** La statistique des importations comprend à peu près toutes les marchandises qui entrent au Canada et qui sont dédouanées pour vente ou usage au pays. Elles comprennent donc les marchandises dédouanées dès leur arrivée au pays et les marchandises dédouanées des entrepôts de douane pour usage au pays.

   d. **Exclusions:** Les mouvements de marchandises suivants sont exclus de la statistique des exportations et des importations (quelques-uns sont classés séparément comme transactions spéciales – non commerciales); l'or et les articles en or dont la valeur de la teneur en or représente 80 p. 100 ou plus de la valeur totale (sauf les alliages d'or dentaire et une petite quantité de déchets sous la forme de balayure de bijoutiers); la monnaie courante; les effets des immigrants; les dons et cadeaux privés; les achats des touristes (seulement ceux qui sont exempts des droits de douane lors de leur importation sont exclus des totaux des importations); les marchandises expédiées aux forces armées et aux diplomates du Canada à l'étranger, ou celles qui sont expédiées par ces personnes; les marchandises expédiées aux forces armées des alliés du Canada de l'OTAN et aux diplomates étrangers au Canada ou encore, celles qui sont envoyées au Canada par ces personnes; les expéditions provisoires de marchandises pour les expositions ou les concours (et les films expédiés en vue de leur projection ou de leur développement); les approvisionnements de soutes et de navires vendus aux navires et aéronefs étrangers dans les ports canadiens ou achetés par des navires et aéronefs canadiens à l'étranger; en général, tous les autres mouvements temporaires et les marchandises en transit.

   La statistique des importations exclut en outre les navires de construction et d'immatriculation britanniques importés en vue de leur usage au Canada et, les navires et aéronefs achetés en vue d'être utilisés comme appareils de transport internationaux, mais non pour transporter des marchandises d'un endroit à l'autre au Canada. Sont aussi exclues de la statistique des exportations, les marchan-

goods shipped to our NATO allies and financed under the Defence Appropriation Acts. The total value of these transfers has been as follows:

Calendar year	Dollars
1950	56,750,000
1951	109,062,000
1952	100,900,000
1953	181,970,000
1954	202,400,000
1955	165,922,000
1956	96,361,000
1957	62,451,000
1958	112,405,000
1959	46,185,000
1960	18,269,000

A description of the changes in coverage introduced in 1960 is provided in the special note "Changes in Coverage of Trade Statistics" on page 12.

4. **Countries Credited:** Exports are credited to the country to which they are consigned at the time that the goods leave Canada, i.e. to the furthest known destination of the goods.

Imports are credited to the country from which the goods were first directed to Canada, except for goods of Central or South American origin consigned to Canada from the United States which are credited to the country of origin.

5. **Quantities:** Units of weight or volume, where shown in this report, relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in special cases otherwise defined in the Customs Tariff. Units of number refer to the number of complete or substantially complete units exported or imported, excluding parts. For any commodity class where the recorded value includes both complete units and parts of these units, the average value per complete unit can not be calculated. "Ton" means 2,000 pounds avoirdupois. "Cwt" means 100 pounds avoirdupois.

6. **Values:** Export entries define the value of exports as the "actual amount received or to be received in terms of Canadian dollars, exclusive of all charges" (freight, insurance, handling, etc.). This definition would give values f.o.b. point of consignment for exports, but in practice it is not always followed. For example, in the years following the termination of exchange control in 1951, a gradually increasing but indeterminate proportion of exports has been reported in United States dollars. This resulted in some overstatement of the value of exports for the period prior to June 1961.

The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but at least in recent years importers have often reported c.i.f. value for free goods or goods subject to specific rates of duty. There is therefore some tendency for the value of these imports to be overstated.

These valuation problems were revealed by research connected with the introduction of new commodity classifications for export and import statistics and by the sharp fall in the value of the Canadian dollar during 1961. Some action has since been taken to reduce the distortion of export and import values.

dises exportées aux alliés du Canada de l'OTAN et financées en vertu des lois des subsides pour la défense. Voici, la valeur de ces transferts:

Année financière	Dollars
1950	56,750,000
1951	109,062,000
1952	100,900,000
1953	181,970,000
1954	202,400,000
1955	165,922,000
1956	96,361,000
1957	62,451,000
1958	112,405,000
1959	46,185,000
1960	18,269,000

La note spéciale "Modifications apportées à la couverture de la statistique du commerce" page 12 décrit les changements apportés au champ d'application en 1960.

4. **Pays de destination:** Les exportations sont créditées aux pays vers lesquels elles sont consignées au moment de leur départ du Canada, soit la destination la plus éloignée connue.

Les importations sont créditées au pays d'où les marchandises ont été, pour la première fois, consignées au Canada, sauf les marchandises en provenance de l'Amérique centrale ou de l'Amérique du Sud qui sont expédiées au Canada venant des États-Unis; dans ce dernier cas, on les attribue à leur pays d'origine.

5. **Quantités:** Les unités de poids ou de volume qui figurent dans le présent rapport, visent le poids ou le volume des marchandises et ne comprennent pas ceux des emballages nécessités par l'expédition, sauf dans des cas spéciaux précisés au tarif douanier. Les unités de quantité représentent le nombre d'articles complets ou dans un état assez complet, exportés ou importés, sauf les pièces. Dans n'importe quelle catégorie de marchandises où la valeur enregistrée comprend les articles complets de même que les pièces de ces articles, il est impossible d'établir la valeur moyenne par unité complète. L'expression "tonne" signifie 2,000 livres avoirdupoids et "cwt", 100 livres avoirdupoids.

6. **Valeurs:** Les documents d'exportations définissent la valeur des exportations comme "la somme réelle reçue ou à recevoir en dollars canadiens, à l'exclusion de tous les frais" (de transport, d'assurance, de manutention, etc.). Cette définition établirait donc la valeur des exportations f.-à.b. point de destination, mais en réalité on ne la respecte pas toujours. Par exemple, au cours des années qui ont suivi la fin du contrôle des échanges en 1951, une proportion des exportations, toujours croissante, mais indéterminée a été déclarée en dollars américains. Ce fait a donné lieu à une évaluation trop élevée des exportations durant la période antérieure à juin 1961.

La valeur des marchandises importées est habituellement celle qui est établie pour les droits de douane. La loi canadienne sur les douanes exige en général l'évaluation des marchandises f.à.b. au point d'expédition du pays exportateur, mais ces dernières années, les importateurs ont souvent déclaré la valeur c.i.f. des marchandises exemptes de droits ou des marchandises auxquelles s'appliquent des taux de douane particuliers. Il existe donc une certaine tendance à exagérer la valeur de ces importations.

Les problèmes relatifs à l'évaluation ont été révélés par des recherches ayant trait à l'adoption d'une nouvelle classification des marchandises pour la statistique des exportations et des importations et par la forte baisse du dollar canadien en 1961. Depuis, on a pris des mesures en vue d'amoindrir la déformation de la valeur des exportations et des importations.

7. **Ports:** Tables 13 and 14 (trade by ports and provinces) show totals of the trade cleared by customs at individual customs ports. This does not imply that exports cleared at particular ports originated at those ports or even in the province in which the port is located. Neither does it imply that imports cleared at particular ports were for consumption at those ports or even in the province in which the port is located. Interprovincial movements frequently occur before or after customs clearance.

8. **Abbreviations:** The letters "n.o.p." mean "not otherwise provided for"; "n.e.s.", "not elsewhere specified".

9. **Revisions:** The data presented in this volume supersede those published in earlier reports (see also the special note "Changes in Coverage of Trade Statistics" on page 12). The detail of revisions is published on coloured pages at the beginning of monthly export and import reports.

7. **Ports:** Les tableaux 13 et 14 (commerce suivant le port et la province) donnent les totaux des marchandises dédouanées dans chaque port douanier. Cela ne signifie pas que les exportations dédouanées dans un port en particulier proviennent de ce port ou même, de la province dans laquelle le port est situé. En outre, cela ne signifie pas que les importations dédouanées dans un port quelconque soient destinées à la consommation dans ce port ou encore, dans la province où le port est situé. Les mouvements interprovinciaux surviennent souvent, avant ou après le dédouanement des marchandises.

8. **Abbréviations:** Les lettres "n.d.a." signifient "non dénommé ailleurs" et "n.c.a.", "non compris ailleurs".

9. **Rectifications:** Les données du présent rapport annulent celles qui ont paru dans les rapports précédents (voir aussi la note spéciale "Modifications apportées à la couverture de la statistique du commerce" page 12). Le détail des rectifications paraît aux pages de couleur au début des rapports mensuels sur les exportations et les importations.

TREATMENT OF GOLD IN CANADIAN TRADE STATISTICS

The general use of gold as a money metal gives it special attributes which distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors and therefore may fluctuate widely from period to period owing to other than ordinary trade or commercial considerations. Also gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed minimum price.

Furthermore, physical movements of gold between countries have no direct or normal relation to sales and purchases. International transactions in gold often occur without its moving across any frontier, the sales or purchases in such cases being recognized by simply setting aside or "earmarking" the gold in the vaults of a central bank. As trade statistics deal only with physical movements of commodities, they would not record all changes in stocks of gold under earmark. Yet such gold transactions would not be different in their economic nature from many physical shipments.

For these reasons movements of gold in a primary or semi-fabricated state have been excluded from published totals of Canada's commodity trade. From January 1, 1952, the standard of exclusion in use has been that suggested by the International Monetary Fund and the United Nations Statistical Office: all gold and gold products in which the value of the gold is 80 per cent or more of the total value are excluded. The only exceptions to this rule are for dental gold alloy and for the gold content of jewellers' sweepings, both of which are included in the appropriate commodity classes.

Since gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is prepared by the Bank of Canada and published monthly as a supplement to the trade statistics. This series is the equivalent of gold production in Canada exclusive of gold held by producers before the refining stage (whether at the mine, in transit, or at the Mint) and less any gold consumed by industry in Canada out of current production (normally a minor part of the total). Since November 1, 1951, the series has also excluded increases in commercial gold stocks held in safe-keeping by the Mint for the account of the mines.

Since March 21, 1956, mines not receiving aid under the Emergency Gold Mining Assistance Act have been allowed to sell their gold to private residents and non-residents, either for export or for safe-keeping in Canada. From April, 1956, such sales have been included in the figures for new gold production available for export.

Because the value of new gold production available for export is a production series, a breakdown of the figures into transactions with individual countries is not possible. Much of the gold is offset in the balance of payments accounts by an increase in Canada's official reserves, rather than by the receipt of exchange from another country. The United States has been for many years the chief market for Canada's gold production, but such commercial exports of gold as now occur are normally directed to other markets.

For many years the only published series on gold trade was new gold production available for export. When the coverage of trade statistics was revised in 1960, records of physical movements of gold were added to the new category of "Special Transactions – Non-trade", and are now published in monthly and annual export and import reports.

TRAITEMENT DE L'OR DANS LA STATISTIQUE DU COMMERCE DU CANADA

L'emploi général de l'or comme métal monétaire lui confère des attributs spéciaux qui le distinguent des autres denrées dans le commerce. Ainsi, en particulier, les mouvements internationaux d'or, étant largement déterminés par des facteurs d'ordre monétaire, peuvent beaucoup fluctuer d'une période à l'autre pour des raisons autres que les raisons ordinaires d'ordre commercial. En outre, l'or est généralement accepté; il n'a pas à surmonter les barrières tarifaires et trouve normalement marché à un prix minimum fixe.

De plus, les mouvements matériels d'or entre pays ne se rattachent pas directement ni normalement aux ventes et achats. Les opérations internationales intéressant l'or s'exécutent souvent sans que l'or franchisse la frontière; en pareil cas, les ventes ou achats sont reconnus simplement par la mise de côté ou "l'affectation" d'or dans les chambres fortes d'une banque centrale. Comme la statistique du commerce porte uniquement sur les mouvements matériels des denrées, elle ne saurait enregistrer tous les changements apportés à l'or ainsi affecté. Et pourtant, de telles opérations ne diffèrent pas au point de vue économique d'un grand nombre d'expéditions matérielles.

Voilà pourquoi les mouvements d'or brut ou semi-ouvré n'ont pas été publiés dans la statistique du commerce canadien de marchandises. Depuis le 1er janvier 1952, la règle adoptée est celle qu'ont proposée le Fonds monétaire international et le Bureau de la statistique des Nations Unies: exclure tout l'or et tous les produits aurifères dans lesquels la valeur de l'or constitue 80 p. 100 ou plus de la valeur totale. Seuls font exception les alliages d'or dentaire et la teneur en or des balayures de bijoutier qui sont tous les deux classés dans les catégories appropriées de marchandises.

Comme l'or est avant tout produit au Canada comme denrée d'exportation, la Banque du Canada prépare et publie à tous les mois comme supplément de la statistique du commerce, une série indiquant la production d'or neuf devant être exporté. Cette série équivaut à la production d'or au Canada, à l'exclusion de l'or détenu par les producteurs avant l'affinage (à la mine, en cours de route ou à la Monnaie) et de l'or consommé par l'industrie au Canada et prélevé sur la production courante (normalement une petite partie du total). Depuis le 1er novembre 1951, la série a aussi fait exclusion des augmentations de stocks d'or gardés en sûreté par la Monnaie pour le compte des mines.

Depuis le 21 mars 1956, les mines qui ne reçoivent pas d'aide en vertu de la loi d'urgence sur l'aide à l'exploitation des mines d'or, ont été autorisées à vendre leur or à des particuliers résidant ou non résidant, soit pour l'exportation, soit pour le conserver en sûreté au Canada. Depuis avril 1956, ces ventes ont été incluses dans les chiffres sur la production d'or neuf destiné à l'exportation.

Puisque la statistique de la valeur de la production nouvelle d'or exportable est une statistique de production, il n'est pas possible de produire les chiffres suivant les opérations intervenues avec chaque pays. Une bonne partie de cet or est contrebalancée dans les comptes de la balance des paiements par une augmentation des réserves officielles du Canada plutôt que par la réception des devises d'un autre pays. Les États-Unis sont depuis plusieurs années le principal marché de l'or produit au Canada, mais les exportations commerciales d'or comme il en est aujourd'hui se dirigent normalement vers d'autres marchés.

Pendant plusieurs années, la production d'or neuf exportable constituait la seule série statistique publiée et visant le commerce de l'or. Quand, en 1960, on a modifié le champ d'application de la statistique du commerce, on a ajouté la statistique des mouvements matériels d'or à la nouvelle catégorie "Transactions spéciales – non commerciales"; ces chiffres paraissent aujourd'hui dans les rapports mensuels et annuels des exportations et importations.

CHANGES IN COVERAGE OF CANADIAN TRADE STATISTICS

Prior to 1960, Canadian export and import statistics differed in their treatment of such special transactions as tourist purchases and shipments of goods to Canadian diplomats abroad or to foreign diplomats in Canada. In addition, both records included such non-commercial transactions as movements of settlers' effects and private donations and gifts. As a result, there were sizable differences between trade balances calculated from unadjusted export and import totals, and those calculated from data adjusted to exclude special and non-commercial transactions.

In 1960 a new category was established in both export and import records under the title "Special Transactions – Non-trade". This category includes various commodity movements which either have no international financial implications or, for various reasons, are better considered separately from merchandise trade in economic analysis. The value of these transactions is now excluded entirely from published totals of Canadian merchandise trade, although statistics for the classes included in this category are still compiled and published.

As a result of these changes, export and import totals will now have substantially the same coverage. They will therefore provide a much better picture of the merchandise trade component of the balance of payments. There are still differences in timing between the trade and balance of payments records, and some commodity movements (such as shipments of goods financed under the Colombo plan) are still included in merchandise trade totals although treated otherwise in balance of payments accounting. These differences are, however, much less significant than in the past.

The former treatment of the classes of transaction included in "Special Transactions – Non-trade" was as follows:

1960 Class	Description	Former treatment	
		Exports	Imports
9905 - 9965	Gold and current coin	excluded	excluded
9980	Movements of goods for Canadian armed forces or diplomats abroad, or foreign armed forces or diplomats in Canada	excluded	largely included
9982	Settlers' effects	included	included
9984	Private donations and gifts	included	included
9986	Tourist purchases	partly included	included
9988	Movements of goods for exhibition or competition	excluded	excluded
9990 - 9992	Photographic film moving for exhibition or processing without sale	partly included	partly included

Totals of Canadian exports published on the new basis are some $40,000,000 per year less than on the former basis, those of Canadian imports some $150,000,000 per year less

MODIFICATIONS APPORTÉES À LA COUVERTURE STATISTIQUE DU COMMERCE CANADIEN

Avant 1960, la statistique des exportations et des importations traitait différemment les transactions spéciales telles que les achats des touristes et les expéditions de marchandises destinées aux diplomates du Canada à l'étranger et aux diplomates étrangers au Canada. En outre, la statistique des exportations et des importations comprenait des transactions non commerciales comme les mouvements d'effets des immigrants et les dons et cadeaux privés. Par conséquent, il y a eu des différences importantes entre les balances du commerce établies d'après les totaux non rectifiés des exportations et des importations et celles établies d'après les données rectifiées en excluant les transactions spéciales et non commerciales.

Depuis 1960, la statistique des exportations et des importations comprend une nouvelle catégorie sous la rubrique "Transactions spéciales – non commerciales". Cette catégorie renferme divers mouvements de marchandises qui n'ont aucune implication financière internationale, ou qu'il vaut mieux, pour diverses raisons, séparer du commerce des marchandises pour fin d'analyse économique. La valeur de ces transactions est maintenant tout à fait exclue des totaux publiés du commerce canadien de marchandises, bien que la statistique des classes comprises dans cette catégorie soit encore établie et publiée.

Par suite de ces modifications, les totaux des exportations et des importations auront dorénavant à peu près la même portée. Ils renseigneront donc de façon plus précise au sujet de l'élément "commerce des marchandises" dans la balance des paiements. Il existe encore des différences entre l'actualité des données du commerce et celle de la balance des paiements et de plus, certains mouvements de marchandises (comme les expéditions de biens financées en vertu du Plan de Colombo) sont encore inclus dans les totaux du commerce des marchandises, bien qu'ils soient traités autrement pour les besoins de la comptabilité de la balance des paiements. Ces différences sont toutefois beaucoup moins importantes que dans le passé.

Voici le traitement antérieur des classes de transactions maintenant comprises dans la catégorie "Transactions spéciales– non commerciales":

1960 Classe	Description	Traitement antérieur	
		Exportations	Importations
9905 - 9965	Or et monnaie courante	exclus	exclus
9980	Mouvements de marchandises destinées aux forces armées ou aux diplomates du Canada à l'étranger, ou aux forces armées ou aux diplomates étrangers au Canada	exclus	en grande partie inclus
9982	Effets des immigrants	inclus	inclus
9984	Dons et cadeaux particuliers	inclus	inclus
9986	Achats des touristes	partiellement inclus	inclus
9988	Mouvements de marchandises à destination des expositions et des concours	exclus	exclus
9990 - 9992	Mouvements de films photographiques en vue d'expositions ou de développement sans qu'il y ait vente	partiellement inclus	partiellement inclus

Les totaux publiés des exportations canadiennes, fondés sur la nouvelle base de calcul, sont annuellement de près de 40 millions de dollars moindres que ceux qui étaient fondés sur la

(1958-1959 rates). All figures in this report for the years 1946-1959 have been adjusted to the new basis unless otherwise specified in footnotes accompanying specific tables. The adjustments have been made as follows:

Former Class No.	Class reading
	I. Deducted from export totals:
9470	Canadian army, navy and air force stores n.o.p. (to Dec. 31, 1949).
9530	Settlers' effects.
9550	Private donations and gifts.
	II. Deducted from import totals:
9000	Film imported for the purpose of reproduction, and re-exported.
9051	Bequests of personal effects or furniture.
9068	Clothing and books, donations of, for charitable purposes, and photos (3) sent by friends.
9193	Articles for the Governor-General or for British or foreign representatives (also class 9192 to Dec. 31, 1957).
9196	Arms, military stores, munitions and other goods, to remain the property of a British Commonwealth country or of a country that is a party to the North Atlantic Treaty (also class 9194 to April 9, 1951).
9201	Casual donations, sent by friends, the value of which does not exceed ten dollars in any case; personal gifts, not exceeding $25.00 in value from members of Canadian forces serving abroad.
9228	Tourist purchases exempt from duty.
9241	Articles presented from abroad in recognition of the saving of human life (to Dec. 31, 1957).
9264	Settlers' effects.

It was not possible to adjust out of former export records such tourist purchases as were included, since these were lost in various commodity class totals, and non-commercial film transactions also could not be isolated. However the the residual inaccuracy of the comparative totals is statistically insignificant. The residual error of comparative import totals is altogether neglibible.

In addition to the abovementioned adjustments one further adjustment was made to comparative import figures for 1946. In that year substantial amounts of Canadian military equipment were returned to Canada from the United Kingdom, Newfoundland and Australia. Such shipments accounted for almost all of the "Canadian goods returned" totals (class 9195) for these three countries in that year. The value for class 9195 for these three countries has therefore been deducted from the adjusted total. The residual overadjustment to the 1946 import total is believed to be statistically insignificant.

The following tables present revised monthly totals of Canadian trade with All Countries, the United States and the United Kingdom, calculated as described above, for the period 1946-1955. Figures for 1956-1959 appear in Tables 21-26. Revisions for other countries were made only for annual totals and appear in the appropriate tables.

base antérieure et ceux des importations canadiennes, environ 150 millions de dollars moindres par année (taux de 1958-1959). Tous les chiffres du présent rapport, visant les années 1946 à 1959, ont été rectifiés d'après la nouvelle base de calcul à moins d'une indication contraire décrite aux renvois qui paraissent à la fin des tableaux en question. Les rectifications ont été faites comme il suit:

Ancien n° de classe	Interprétation de la classe
	I. Soustraits des totaux des exportations:
9470	Approvisionnements de l'armée, de la marine et de l'aviation du Canada n.d.a. (le 31 décembre 1949).
9530	Effets des immigrants.
9550	Dons et cadeaux particuliers.
	II. Soustraits des totaux des importations:
9000	Films importés en vue de leur reproduction et réexportés.
9051	Legs d'effets personnels ou de meubles.
9068	Dons de charité de vêtements et de livres et dons de photographies (3) envoyées par des amis.
9193	Articles destinés au Gouverneur général ou aux représentants britanniques ou étrangers (classe 9192 jusqu'au 31 décembre 1957).
9196	Armes, approvisionnements militaires, munitions et autres articles qui appartiendront à un pays faisant partie du Commonwealth britannique ou à un État membre du Traité de l'Atlantique Nord (classe 9194 jusqu'au 19 avril 1951).
9201	Cadeaux occasionnels envoyés par des amis, dont la valeur ne dépasse jamais dix dollars; cadeaux personnels dont la valeur ne dépasse pas $25, envoyés par des membres des forces armées du Canada en fonction à l'étranger.
9228	Achats en franchise des touristes.
9241	Articles offerts par des étrangers en témoignage de reconnaissance à une personne qui a sauvé une vie humaine (au 31 décembre 1957).
9264	Effets des immigrants.

Il n'a pas été possible de rectifier toute la statistique antérieure des exportations en ce qui a trait à certains articles comme les achats des touristes par exemple, car ces derniers avaient été absorbés dans divers totaux de classes de marchandises; en outre, on n'a pu rassembler toutes les transactions visant les films non commerciaux. Toutefois, l'inexactitude résiduelle des totaux comparatifs a très peu d'importance au point de vue de la statistique. L'erreur résiduelle des totaux comparatifs des importations est, dans l'ensemble, très légère.

En plus des modifications mentionnées ci-dessus, on a apporté un autre changement aux chiffres comparatifs des importations de 1946. Cette année-là, des quantités considérables d'équipement militaire canadien ont été renvoyées au Canada par le Royaume-Uni, Terre-Neuve et l'Australie. Ces expéditions ont répondu pour la quasi-totalité des articles inscrits au groupe des "articles canadiens renvoyés" (classe 9195) de ces trois pays. La valeur de la classe 9195 pour ces trois pays a donc été soustraite du total rectifié. On estime que toutes les rectifications résiduelles du total des importations de 1946 sont peu importantes.

Les tableaux qui suivent présentent les chiffres mensuels revisés du commerce canadien avec tous les pays, les États-Unis et le Royaume-Uni, calculés comme on l'a expliqué ci-dessus, pour la période 1946-1955. Les chiffres des années 1956-1959 paraissent aux tableaux 21 à 26. Les rectifications relatives aux autres pays ont été apportées aux chiffres annuels seulement et paraissent aux tableaux appropriés.

NEW COUNTRY CLASSIFICATION FOR EXTERNAL TRADE STATISTICS

A new classification of countries was introduced for export and import statistics as of January 1, 1960. The new classification is basically geographical: it divides the world into nine geographic regions, and within each region lists one sub-group of Commonwealth countries and a second of other countries. Statistics for earlier years presented in this report have been adjusted to conform with the new classification as far as possible.

The regions used in the new classification, and the order in which they are listed, are as follows:

Western Europe
Eastern Europe
Middle East
Other Africa
Other Asia
Oceania
South America
Central America and Antilles
North America

The arrangement of the regions was determined by the convenience of listing the United Kingdom first when presenting statistics of commodities by countries, and the United States last, directly above the commodity totals. This arrangement of country detail is traditional in Canadian trade reports, and has proven useful in permitting ready reference to details of trade with Canada's two leading trading partners.

The countries included in each region are shown on the following pages. In Canadian statistics the territory of any country is considered to be the geographic area of the country unless otherwise stated; that is, it includes both the customs area of the country and also any free areas in which customs control may not be exercised. Countries with which Canada's trade is small are grouped with contiguous or related areas.

The adoption of a new country classification facilitated extensive changes in the country names and the extent of country detail shown in Canadian trade statistics. The drafting of these changes was guided by two criteria, which will also be used to guide future revisions to the classification:

1. Total trade between Canada and each country specified should exceed $100,000 per year.
2. Available documentation must be adequate to compile accurate statistics of trade between Canada and each country specified.

NOUVELLE CLASSIFICATION DES PAYS POUR LA STATISTIQUE DU COMMERCE EXTÉRIEUR

Le 1er janvier 1960, on a établi une nouvelle classification des pays pour la statistique des exportations et des importations. La nouvelle classification est fondamentalement d'ordre géographique: elle divise le monde en neuf régions géographiques et à l'intérieur de chaque région, groupe les pays du Commonwealth en un sous-groupe et les autres pays en un second sous-groupe. La statistique antérieure qui paraît dans le présent rapport a été rectifiée autant que possible conformément à la nouvelle classification.

Voici les régions utilisées dans la nouvelle classification et en outre, l'ordre dans lequel elles sont énumérées:

Europe occidentale
Europe orientale
Moyen-Orient
Autres pays d'Afrique
Autres pays d'Asie
Océanie
Amérique du Sud
Amérique centrale et Antilles
Amérique du Nord

L'ordre de l'énumération des régions a été établi de façon à indiquer d'abord le Royaume-Uni dans la présentation de la statistique des marchandises selon les pays, et, les États-Unis en dernier, directement au-dessus des totaux de marchandises. Cette disposition des pays est traditionnelle dans les rapports du commerce du Canada et s'est révélée utile, car elle permet de se référer rapidement aux données du commerce du Canada avec ses deux principaux partenaires commerciaux.

Les pays compris dans chaque région sont énumérés aux pages suivantes. Dans la statistique du Canada, on estime que le territoire de n'importe quel pays est la région géographique du pays à moins d'indication contraire: c'est-à-dire que la région comprend et la région douanière du pays et toutes les régions libres où les règlements douaniers ne peuvent être appliqués. Les pays avec lesquels le commerce canadien est peu important sont groupés avec les régions avoisinantes ou similaires.

L'adoption d'une nouvelle classification des pays a facilité les modifications importantes apportées aux noms des pays et à la portée des données présentées dans la statistique du commerce du Canada. Ces changements ont été établis suivant deux critères qui seront aussi utilisés dans les prochaines revisions de la classification:

1. La valeur du commerce total entre le Canada et chaque pays énuméré doit atteindre plus de $100,000 par année.
2. La documentation disponible doit être appropriée en vue de permettre d'établir la statistique exacte du commerce entre le Canada et chaque pays mentionné.

[1] Canadian Farm Products cover, for exports, commodities actually produced in their original form on Canadian farms; and for imports, commodities of which the basic raw materials are such as Canadian farms produce. Foreign Farm Products cover, for both exports and imports, materials or commodities such as Canada does not produce, e.g.—cane sugar, tea, rubber, cotton, silk, etc.

VALUE, PRICE AND VOLUME INDEXES OF EXPORTS AND IMPORTS

Changes in the value of exports or imports between two periods may be caused by variations in the quantity or volume of goods exported or imported, by fluctuations in the prices at which trade is transacted, or by a combination of these factors. If the general level of prices should rise between two periods this will tend to increase the value of trade in the second period even in the absence of an increase in the volume of goods bought and sold. A decline in the price level will tend to depress trade values. Similarly, quantity changes may affect trade values in the absence of price change. When prices and quantities change in the same direction they will produce very sharp value changes in that direction. Finally prices and quantities may change in opposite directions, which may cause values to increase while quantities decrease or quantities to increase while values decrease. To assess the meaning of changes in the value of trade properly it is therefore necessary to know the individual influence of price and volume movements on the value totals.

Table 38 presents a comparison of the declared (statistical) values of domestic exports and imports in current dollars and in constant dollars, together with annual indexes of the declared values, prices and physical volume of Canada's trade. Tables 39-44 present the monthly record from January, 1954 of the value, price and volume indexes published regularly in the Trade of Canada monthly reports.[1] These indexes were set up on the interim reference base 1948 = 100 and are computed on that basis pending conversion to a later base period. Monthly indexes have not been calculated for periods prior to July, 1945, but an annual record from 1926 has been published.[2]

The indexes are computed in the following manner. The value index expresses the value of trade in a given period as a percentage of the value in the base period. The price index is of the fixed-weight aggregative (Laspeyres) type, and combines unit values calculated from the trade statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting or insufficiently homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is then derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type. The relationship between these series is thus multiplicative, not additive. The constant dollar values of Table 38 are computed by dividing the declared values by corresponding price indexes. As division by the published (Laspeyres) price indexes yields constant dollar values in which the groups do not sum to the total, a separate price index of the moving-current-weight (Paasche) type has been used in this computation.

In computing the price index certain minor adjustments were made to the regular grouping of commodities used in the trade statistics, and all three indexes are presented on the basis of these adjusted groups. Thus the groups "agricultural and vegetable products" and "animals and animal products" are combined into one group now titled "agricultural and animal products"; the sub-group "rubber and its products" is transferred to the "miscellaneous products" group; and ships are transferred to the "iron and steel and products" group. In the case of imports only, plumbing and heating equipment is transferred to the "non-ferrous metals and products" group, phosphate rock to the "chemicals and fertilizer" group, and advertising matter to the "miscellaneous products" group. Otherwise the totals to which the indexes apply are those elsewhere published in the trade statistics.

[1] For a detailed description of these series see *Export and Import Price Indexes by Months, July, 1945 – June, 1950 (1948 = 100)*, Dominion Bureau of Statistics, 1950 (Reference Paper no. 8).

[2] For a description of the earlier annual data see *Export and Import Price Indexes, 1926-1948 (1935-39 = 100)*, Dominion Bureau of Statistics, 1949 (Reference Paper No. 5), and for the latest revision of these data see *Review of Foreign Trade, First Half Year 1954*, Dominion Bureau of Statistics, 1954, pp. 23-31.

INDICES DE LA VALEUR, DES PRIX ET DU VOLUME DES EXPORTATIONS ET DES IMPORTATIONS

Les changements de la valeur des exportations ou des importations d'une période à l'autre tiennent soit aux variations de la quantité ou du volume des marchandises exportées ou importées, soit aux fluctuations du prix pratiqué, soit à la conjugaison de ces deux facteurs. Si le niveau général des prix augmente d'une période à l'autre, la valeur du commerce de la seconde période aura tendance à augmenter même si le volume des marchandises achetées ou vendues n'augmente pas. Si le niveau des prix baisse, la valeur du commerce aura tendance à baisser. De même, les changements de la quantité peuvent, sans que les prix changent, modifier la valeur du commerce. Lorsque les prix et les quantités évoluent dans le même sens, il en résulte de très vifs changements de valeur dans ce sens. Enfin, les prix et les quantités peuvent évoluer en sens contraire et alors les valeurs augmentent tandis que les quantités diminuent ou bien les quantités augmentent tandis que les valeurs diminuent. Pour apprécier pleinement la portée des changements de la valeur du commerce, il faut donc connaître l'effet particulier du mouvement des prix et du volume sur la valeur totale.

Le tableau 38 compare la valeur (statistique) déclarée des exportations domestiques et des importations en dollars valeur courante et en dollars valeur constante et donne les indices annuels de la valeur déclarée, des prix et du volume physique du commerce canadien. Les tableaux 39-44 donnent depuis janvier 1954 les indices mensuels de la valeur, des prix et du volume publiés régulièrement dans les rapports mensuels portant sur le commerce du Canada[1]. Ces indices ont été calculés d'après la période de base provisoire de 1948 établie à 100 et sont calculés sur cette base jusqu'à la conversion à une base plus récente. Il n'existe pas d'indices mensuels pour les périodes antérieures à juillet 1945, mais un état annuel à compter de 1926 a déjà paru[2].

Voici comment sont établis les indices. L'indice de la valeur exprime la valeur du commerce d'une période donnée en pourcentage de la valeur de la période de base. L'indice des prix est un indice collectif à coefficient fixe (type Laspeyres) et combine les valeurs unitaires établies d'après la statistique commerciale avec certains prix de gros ou autres. Ces prix sont utilisés lorsque l'insuffisance de données quantitatives ou des articles insuffisamment homogènes dans la statistique commerciale ne permettent pas d'établir des séries de valeurs unitaires suffisamment représentatives. On obtient ensuite l'indice du volume en divisant l'indice de la valeur par l'indice des prix correspondant; l'indice du volume est donc un indice à pondération courante (type Paasche). Ces séries sont ainsi en rapport multiplicatif et non pas additif. On obtient les valeurs en dollars constants du tableau 38 en divisant les valeurs déclarées par les indices des prix correspondants. Comme la division par les indices des prix publiés (Laspeyres) donne des valeurs en dollars constants dont les groupes, si on les additionne, ne correspondent pas avec le total, on a utilisé pour établir ce calcul, un indice des prix distinct à poids courant mobile (type Paasche).

Dans le calcul de l'indice des prix, on a apporté certains ajustements secondaires au groupement normal des denrées utilisé par la statistique commerciale et tous les trois indices se fondent sur ces groupes ajustés. Voici ces ajustements: les groupes "produits agricoles et végétaux" et "animaux et produits animaux" sont réunis en un seul groupe maintenant nommé "produits agricoles et animaux"; le sous-groupe "caoutchouc et produits" est passé au groupe "produits divers"; et les bateaux sont passés au groupe "fer et acier et produits". Dans le cas des importations seulement, l'équipement de tuyauterie et de chauffage est passé au groupe "métaux non ferreux et produits", la roche phosphatée, au groupe "produits et engrais chimiques", et les matières publicitaires, au groupe "produits divers". Hormis cela, les totaux que visent les indices sont les totaux figurant ailleurs dans la statistique commerciale.

[1] Ces séries sont expliquées en détail dans *Indices des prix des exportations et des importations, par mois, juillet 1945 – juin 1950 (1948 = 100)*, Bureau fédéral de la statistique, 1950 (Document de référence n° 8).

[2] Les données annuelles antérieures se trouvent dans *Indices des prix des exportations et des importations, 1926-1948 (1935-39 = 100)*, Bureau fédéral de la statistique, 1949 (Document de référence n° 5); voir les dernières revisions de ces données dans *Revue du commerce extérieur du Canada, premier semestre, 1954*, Bureau fédéral de la statistique, 1954, pp. 23-31.

TRADE BY THE STANDARD INTERNATIONAL TRADE CLASSIFICATION[1]

Users of foreign trade statistics of more than one country have always been faced with serious difficulties arising from the limited comparability between such data, most countries having their own distinct statistical classifications of commodities. The League of Nations made an effort to solve this problem by suggesting as a basic classification its *Minimum List of Commodities for International Trade Statistics.* The League's work was resumed after the war under the direction of the United Nations Statistical Commission which, in 1950, approved the *Standard International Trade Classification.* National governments were urged to make use of the S.I.T.C., either by adopting it as a primary classification in compiling their trade statistics, or by converting national statistical data to it for international use. Canadian trade statistics are now converted to the S.I.T.C. and current data are published, along with the statistics of several other countries, in the United Nations *Commodity Trade Statistics* series.[2]

Statistics showing Canadian trade during the calendar years 1959 and 1960 on the basis of the S.I.T.C. are presented in the following table. It should be noted that Table 45 relates to total exports (Canadian produce plus foreign produce), and that totals for imports differ from those appearing in other tables of this report by the exclusion of foreign coin, except gold, and repairs on ships and vessels.

The keys for converting Canada's export and import commodity statistics to the S.I.T.C. have been revised since the publication of the first indexed edition of the S.I.T.C. in April, 1953. The data for 1959 and 1960 appearing in Table 45 were compiled according to the revised keys, and therefore do not compare exactly with figures published in this table prior to 1953. It is expected that a few further revisions may be made to the present commodity indexes for the S.I.T.C. After this question has been clarified, revised data will be prepared.

COMMERCE SELON LA CLASSIFICATION TYPE POUR LE COMMERCE INTERNATIONAL[1]

La statistique du commerce extérieur de plus d'un pays a toujours présenté à ses utilisateurs de graves difficultés en raison de la comparabilité limitée des données, la plupart des pays ayant leur propre classification des marchandises. La Société des Nations, cherchant à résoudre le problème, avait proposé comme classification de base sa *Liste minimum de marchandises pour la statistique du commerce international.* Le travail de la Société a été repris après la guerre sous la direction de la Commission de statistique de l'Organisation des Nations Unies qui, en 1950, approuva la *Classification type pour le commerce international.* Les gouvernements nationaux furent priés de se servir de la C.T.C.I., soit comme classification de base dans l'établissement de leur statistique du commerce, soit en modifiant la présentation de leur statistique conformément à la nouvelle classification. Le Canada a déjà adapté sa statistique du commerce à la C.T.C.I., et les données courantes de même que celles de plusieurs autres pays sont publiées dans le bulletin des Nations Unies *Commodity Trade Statistics*[2].

Les statistiques du commerce canadien pour les années civiles 1959 et 1960 sont données dans les tableaux qui suivent, d'après la C.T.C.I. Il est à noter que le tableau 45 a trait aux exportations totales (produits canadiens et réexportations) et que les totaux des importations diffèrent de ceux des autres tableaux du présent rapport, puisqu'ils ne comprennent pas le numéraire étranger, sauf l'or, ni la réparation des navires et vaisseaux.

Les explications sur la façon de ramener la statistique des exportations et des importations de marchandises du Canada à la C.T.C.I. ont été revisées depuis la publication de la première édition indexée de cette classification, en avril 1953. Les données pour 1959 et 1960 qui paraissent au tableau 45 ont été calculées d'après cette revision et, en conséquence, ne sont pas rigoureusement comparables aux chiffres du même tableau publiés avant 1953. Quelques autres revisions seront peut-être faites aux indices des denrées pour la C.T.C.I. Cette question une fois réglée, des données revisées seront établies.

IMPORTS FROM CENTRAL AND SOUTH AMERICA

Until the middle of 1946, all imports were credited in Canadian trade statistics to the countries from which the goods were consigned to Canada. But beginning in July, 1946, a new method was adopted for crediting goods produced in Central or South America (including Bermuda and the West Indies) but consigned to Canada from the United States (and usually purchased in that country). This was to credit such shipments to the country in which the goods were originally produced.

At the time when this change was made its effect on Canadian trade statistics was minor. Under immediate post-war trading conditions almost all shipments of Central and South American goods were consigned to Canada from the country in which the goods were produced. With the return of more normal trading conditions a much greater proportion of these countries' goods has since come to be consigned to Canada from entrepôt markets in the United States.

A survey was begun in 1953 to determine the amount of imports credited to Central or South American countries which was actually consigned to Canada from the United States. Columns 4 and 8 or Table 46 show the value of imports thus recorded in 1959 and 1960. While only a minor part of recorded imports from Commonwealth countries in Central and South America was actually consigned to Canada from the United States, and while the proportion was also low for Venezuela and the Netherlands Antilles (whose chief export to Canada is oil), for most other countries the amounts concerned were substantial. During the 1956-1960 period, on the average about 27 per cent of total imports recorded as from these other countries was actually consigned to Canada from the United States.

For many years Canadian trade statistics have included tables showing imports which moved *through* the United States en route to Canada, though consigned to Canada from some third country (see Tables 15 and 17). One use of these tables is to show the amount of Canadian imports handled by United States seaports rather than by Canadian seaports. But when imports of goods of Central or South American origin consigned to Canada from the United States began to be classified by country of origin, the tables of trade via United States ports no longer fully revealed the extent to which Canadian importers used United States ports. The reason is that this special category of imports enters neither the total of imports from the United States nor the total of imports consigned from a third country and shipped to Canada *via* a United States seaport. Consequently imports from Central or South American countries direct to Canadian seaports seemed greater than was in fact the case (the totals being estimated by deducting the data in Table 17 from those in Table 10) by the amount of goods consigned from the United States but credited to some Central or South American country. However the correct totals for direct shipments can now be obtained from Table 46.

Table 46 shows in columns 1 and 5 total imports recorded as from Central or South American countries (these figures also appear in Table 10). The amount of goods originating in Central or South America but consigned to Canada from the United States is shown in columns 4 and 8 (such shipments would be credited to the United States under the procedure used to classify other imports). Columns 3 and 7 show imports consigned to Canada from Central or South American countries but shipped *through* a United States seaport (these figures also appear in Table 17). Thus direct shipments to a Canadian port from such countries, as shown in columns 2 and 6, can be obtained by deducting columns 3 and 4 and columns 7 and 8 from columns 1 and 5, respectively.

IMPORTATIONS DE L'AMÉRIQUE CENTRALE ET DE L'AMÉRIQUE DU SUD

Jusqu'au milieu de 1946, toutes les importations du Canada étaient attribuées dans la statistique du commerce du Canada aux pays d'où les marchandises étaient expédiées au Canada. À compter de juillet 1946, cependant, une nouvelle méthode a été adoptée à l'égard des marchandises produites dans l'Amérique centrale ou l'Amérique du Sud (y compris les Bermudes et les Antilles), mais expédiées des États-Unis au Canada (et habituellement achetées aux États-Unis), afin de les attribuer au pays où elles étaient originairement produites.

À l'époque où le changement a été opéré, la statistique du commerce du Canada s'en est peu ressentie. Au lendemain de la guerre alors que régnaient des conditions commerciales bien particulières, presque tous les envois de marchandises de l'Amérique centrale et de l'Amérique du Sud étaient expédiés au Canada à partir du pays même où elles étaient produites. Depuis le retour de conditions plus normales, une proportion beaucoup plus grande des marchandises de ces pays sont expédiées au Canada à partir des marchés américains où elles sont entreposées.

On a commencé un relevé en 1953 afin de déterminer le chiffre des importations attribuées aux pays de l'Amérique centrale ou de l'Amérique du Sud qui étaient en fait expédiées des États-Unis au Canada. Les colonnes 4 et 8 du tableau 46 montrent la valeur de ces importations en 1959 et 1960. Si seule-seulement une faible partie des importations enregistrées des pays du Commonwealth situés en Amérique centrale ou en Amérique du Sud étaient réellement expédiées des États-Unis au Canada et si la proportion en était faible aussi quant au Venezuela et aux Antilles néerlandaises (dont la principale marchandise exportée au Canada est l'huile), elle était considérable dans le cas de la plupart des autres pays. En moyenne, 27 p. 100 environ de toutes importations enregistrées comme provenant de ces autres pays ont été en fait expédiées des États-Unis au Canada au cours de la période 1956-1960.

Depuis plusieurs années, la statistique du commerce du Canada comprenait des tableaux montrant les importations acheminées *via* les États-Unis sur le Canada, bien qu'elles fussent expédiées de quelque troisième pays au Canada (voir tableaux 15 et 17). Ces tableaux servent en particulier à montrer le chiffre des importations canadiennes qui sont passées par les ports de mer américains plutôt que par les ports de mer canadiens. Cependant, lorsqu'on a commencé à classer selon le pays d'origine les importations de marchandises provenant de l'Amérique centrale ou de l'Amérique du Sud, les tableaux des marchandises passant par les ports américains ne montraient plus pleinement jusqu'à quel point les importateurs canadiens utilisaient les ports américains. La raison en est que cette catégorie spéciale d'importations ne figure ni dans le total des importations provenant des États-Unis ni dans celui des importations provenant d'un troisième pays et expédiées au Canada *via* un port de mer américain. En conséquence, les importations en provenance des pays de l'Amérique centrale ou de l'Amérique latine et acheminées directement sur les ports de mer canadiens semblaient plus élevées qu'en réalité (on évalue les chiffres en soustrayant ceux du tableau 17 de ceux du tableau 10) en raison, de la quantité de marchandises expédiées des États-Unis mais attribuées à quelque pays de l'Amérique centrale ou de l'Amérique latine. Au moyen du tableau 46 on peut toutefois obtenir les chiffres exacts quant aux expéditions directes.

Le tableau 46 montre aux colonnes 1 et 5 les importations totales enregistrées comme provenant des pays de l'Amérique centrale ou de l'Amérique latine (ces chiffres paraissent aussi au tableau 10). La quantité de marchandises en provenance de l'Amérique centrale ou de l'Amérique latine mais expédiées au Canada des États-Unis est indiquée aux colonnes 4 et 8 (ces expéditions doivent être attribuées aux États-Unis d'après la même méthode que celle qui sert au classement des autres importations). Les colonnes 3 et 7 donnent les importations expédiées des pays de l'Amérique centrale et de l'Amérique latine au Canada mais acheminées sur le Canada *via* un port de mer des États-Unis (ces chiffres paraissent aussi au tableau 17). Ainsi les expéditions directes de ces pays sur un port de mer du Canada, ainsi qu'il est indiqué aux colonnes 2 et 6, peuvent être calculées en soustrayant, respectivement, les colonnes 3 et 4 et les colonnes 7 et 8 des colonnes 1 et 5.

PREFACE

The preparation of annual volumes of "Trade of Canada" has been delayed by a combination of circumstances involving staff shortages and technical problems, especially those arising from the revision of export and import commodity classifications. In view of lack of comparability between the old and the new commodity classifications it was considered advisable to undertake a thorough study of export and import entries for given test months over a period of years to support the preparation of adequate commodity convertibility keys. In order to clear up the backlog of annual reports Volumes I, II and III of Trade of Canada are being combined in separate issues comprising two or more years as follows:

Volume I, Summary and Analytical Tables

The present issue encompassing the years 1960-1964 presents a selection of summary and analytical tables designed to provide historical continuity for commodities despite classification changes during the period of the revision from the former component materials statistical classification to the new expanded system. The new classification, based upon concepts of component material, stage of fabrication and end-use is designed to facilitate analytical comparisons utilizing commodity statistics of trade, transportation, manufacturing production and other important economic indicators. Subsequent issues of Volume I, planned for 1969, include a report covering 1965-1966 to be produced by mid year and a report covering 1967-1968 planned for the second half of 1969.

Volume II, Exports

Reports for the periods 1961-1962 and 1963-1964 have been published; that for 1965-1966 will be issued soon and the report for 1967-1968 will be issued during 1969. Two year issues will be then replaced by annual reports, beginning with that for 1969.

Volume III, Imports

Reports are also being prepared for two year periods (with a one year overlap) in order to bring this series up to date. The report for the period 1962-1964 has been published ahead of that for 1960-1962 which was delayed for technical reasons arising from the revision of the import commodity classification and a decision to provide comparability back to the year 1960 on the revised commodity basis. This report and that for the period 1964-1966 will be issued during 1969.

PRÉFACE

La préparation des volumes annuels sur le "Commerce du Canada" a été retardée par un concours de circonstances mettant en cause une pénurie de personnel et des problèmes techniques, qui tiennent surtout aux modifications apportées à la classification des marchandises d'importation et d'exportation. Vu que la nouvelle classification n'est pas comparable à l'ancienne, on a cru bon de faire une étude approfondie des déclarations d'exportation et d'importation pour certains mois d'épreuve au cours d'un certain nombre d'années pour faciliter la mise au point d'une clé de convertibilité pour les classes de marchandises. Afin de venir à bout de l'accumulation de rapports annuels, on a réuni les volumes I, II et III de Commerce du Canada en publications distinctes portant sur deux ou plusieurs années, comme il suit:

Volume I, tableaux sommaires et analytiques

La présente édition vise les années 1960-1964 et offre un ensemble de tableaux récapitulatifs et analytiques faisant le lien entre l'ancienne classification basée sur les éléments composants et le nouveau système élargi. La nouvelle classification, fondée sur les éléments composants, le stade de fabrication et l'utilisation terminale veut faciliter les comparaisons analytiques faites à partir de statistiques sur le commerce, le transport, la production manufacturière et d'autres importants indicateurs économiques. Les prochaines éditions du Volume I, qui devraient paraître en 1969, comprennent un rapport sur 1965-1966, qui devrait être prêt au milieu de l'année, et un autre sur 1967-1968, qui devrait paraître au second semestre de 1969.

Volume II, exportations

Les éditions portant sur 1961-1962 et 1963-1964 ont été publiées; l'édition de 1965-1966 est sous presse et celle de 1967-1968 devrait paraître en 1969. Les éditions groupant les résultats de deux années seront remplacées par des rapports annuels à compter de 1969.

Volume III, importations

Les prochains rapports viseront une période de deux ans (avec chevauchement d'une année), jusqu'à ce que cette série soit à jour. Le rapport comprenant 1962-1964 a été publié avant celui de 1960-1962, retardé par des difficultés techniques découlant de la revision de la classification des marchandises d'importation et de la décision de fournir des données revisées comparables depuis 1960. Ce rapport et celui de 1964-1966 devraient paraître en 1969.

EXPLANATORY NOTES

1. Source of Data

Statistics of exports are compiled from information appearing on customs export entries, except for data on electricity and on crude petroleum exported by pipeline. Since January 1, 1960, electricity exports are reported by the exporting firms through the National Energy Board, and since January 1964, oil exported by pipeline is reported by the pipeline companies direct to the Dominion Bureau of Statistics.

Statistics of imports are compiled from information appearing on customs import entries and invoices, except for data on electricity. Since January 1963, electricity imports are also reported by the importing firms direct to the Bureau.

2. Time Periods

Trade statistics for any period include all goods declared on customs entries received in the DBS during the calendar period in question and on electricity and pipeline reports received within twelve working days of the close of the calendar period. Most customs entries reach DBS within a week of the date the goods are cleared, although export entries for some water-borne shipments arrive much later. Electricity exports and imports are usually included in the statistics for the period during which these exports and imports actually occurred. Pipeline exports of crude petroleum are reported too late for inclusion in statistics for the month when these exports actually occurred; they are therefore included in statistics for the following month. Over the whole year, however, this makes little difference except in the case of the last month, i.e., December. Exports occurring in the month of December are included in the statistics for January following. In other words, exports of crude petroleum included in a given year are the actual exports occurring in December of the preceding year and in eleven months of the year concerned. The same process is repeated for other years so that in any given year the statistics for the same twelve months are included.

3. Coverage

(a) **Domestic Exports:** Statistics of domestic exports include goods which are wholly produced in Canada and goods, previously included in import statistics, which have been changed in form by further processing in Canada and then exported.

(b) **Re-exports:** Statistics, of re-exports include goods, previously included in import statistics which are exported from Canada in the same form as when imported. Minor operations such as sorting and repacking are not considered as changing the condition of imported goods.

Although there has been no change in the definition of re-exports, commencing January 1964, statistics of re-exports include exports from customs warehouses, which were previously excluded from this record. This parallels a change in import statistics, which from January 1964, include goods entered into customs warehouses rather than goods cleared from customs warehouses.

(c) **Imports:** From January 1964, statistics of imports include substantially all goods which are cleared by customs immediately on arrival in Canada plus goods which are entered into customs warehouses rather than being cleared on arrival. Prior to January 1964, import statistics included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover

NOTES EXPLICATIVES

1. Source des données

Les statistiques sur les exportations sont établies à partir des documents d'exportation recueillis par les Douanes, sauf dans le cas des données sur l'électricité et le pétrole brut exporté par oléoduc. A compter de janvier 1960, les exportations d'électricité sont fournis par les compagnies exportatrices par l'entremise de l'Office national de l'énergie tandis que depuis janvier 1964, les compagnies exportatrices de pétrole par oléoduc fournissent directement leurs rapports au Bureau fédéral de la statistique.

Les statistiques sur les importations sont établies à partir des déclarations en douane et des factures d'importation recueillies par les Douanes, sauf dans le cas des données sur l'électricité. A compter de janvier 1963, les compagnies importatrices d'électricité fournissent directement leurs rapports au Bureau fédéral de la statistique.

2. Périodes

Les statistiques sur le commerce des marchandises pour une période quelconque visent la totalité des marchandises déclarées dans les documents de douanes parvenus au B.F.S. durant la période civile observée et dans les rapports sur l'électricité et le pétrole par oléoduc reçus dans les douze premiers jours ouvrables qui suivent la période. Dans la plupart des cas, les déclarations des douanes parviennent au B.F.S. dans la semaine suivant le dédouanement des marchandises. Cependant, la transmission des déclarations de certaines exportations par voie maritime prend beaucoup plus de temps. Les exportations et les importations d'électricité sont généralement incluses dans les statistiques couvrant la période au cours de laquelle ces exportations et importations ont effectivement eu lieu. Les déclarations des exportations de pétrole brut par oléoduc qui ne parviennent pas à temps pour être incluses dans les statistiques du mois au cours duquel elles ont eu lieu figurent dans les statistiques du mois suivant. Si l'on prend une année complète, ce décalage ne se fait sentir que le dernier mois, c'est-à-dire que les chiffres de décembre n'apparaissent que dans les statistiques du mois de janvier suivant. En d'autres termes, les statistiques des exportations de pétrole brut d'une année couvrent, en réalité, les exportations du mois de décembre de l'année précédente et des onze premiers mois de l'année observée. Ce fait se produisant tous les ans, les statistiques couvrent toujours la même période de douze mois.

3. Couverture

(a) **Exportations nationales:** Les statistiques des exportations nationales couvrent les produits canadiens et les marchandises entièrement fabriquées au Canada, ainsi que des marchandises importées et qui, à ce titre, figurent dans les statistiques des importations, qui sont exportées après transformation au Canada.

(b) **Réexportations:** Les statistiques des réexportations couvrent les marchandises importées et qui, à ce titre, figurent dans les statistiques des importations, qui sont exportées du Canada dans l'état où elles étaient lors de leur importation. On ne considère pas que les manipulations secondaires comme le triage ou le conditionnement modifient l'état des marchandises importées.

Bien que la définition du terme "réexportation" n'ait pas été modifiée, depuis janvier 1964, les statistiques des réexportations couvrent les exportations en provenance des entrepôts en douane, qui n'étaient pas comprises dans les exportations auparavant. Il en est de même pour les statistiques des importations qui, depuis janvier 1964, couvrent les entrées de marchandises dans les entrepôts en douane et non plus les sorties de marchandises dédouanées des entrepôts en douane.

(c) **Importations:** Depuis janvier 1964, les statistiques des importations comprennent à peu près toutes les marchandises dédouanées dès leur arrivée au Canada et les marchandises entreposées en douane au lieu d'être dédouanées à leur arrivée. Avant janvier 1964, les statistiques des importations couvraient les marchandises dédouanées dès leur arrivée et les marchandises entreposées en douane à mesure que les prélèvements étaient dédouanés. Les

the same totals, except for a small amount of goods which is entered into customs warehouses and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance.. A more detailed discussion of this change appears at pages 14 under the title "New Basis of Compiling Trade Statistics".

(d) **Exclusions:** The following commodity movements are excluded from both export and import statistics (some are recorded separately as Special Transactions – Non-trade): gold and gold products where the value of the gold content is 80 per cent or more of the total value (a small amount of gold scrap in the form of jewellers' sweepings is included in export class 256-99 and import class 258-99); current coin; settlers' effects; private donations and gifts; tourist purchases (only those exempt from duty are excluded from import statistics); goods moving to or from Canadian armed forces or diplomats abroad, or to or from the forces of our NATO allies or foreign diplomats in Canada; temporary shipments of goods for exhibition or competition (and film moving for exhibition or processing); bunker supplies and ships' stores sold to foreign vessels or aircraft in Canadian ports, or purchased by Canadian vessels or aircraft abroad; generally, all other temporary and transit movements.

Import statistics also exclude ships of British construction and registry imported for use in Canada, and ships and aircraft purchased for use as international carriers but not used to carry goods between points in Canada.

Export statistics also exclude goods shipped to our NATO allies and financed under the Defence Appropriation Act. The total value of these transfers has been as follows:

Calendar year	Dollars
1955	165,922,000
1956	96,361,000
1957	62,451,000
1958	112,405,000
1959	46,185,000
1960	18,269,000
1961	23,036,000
1962	19,079,000
1963	2,984,000
1964	31,328,000

A description of the changes in coverage introduced is provided in the special note "Changes in Coverage of Trade Statistics" at page 11.

4. Countries Credited

Exports are credited to the country to which they are consigned at the time the goods leave Canada, i.e., to the furthest known destination of the goods.

deux méthodes conduisent en fin de compte au même total; la seule différence provient de la faible proportion des marchandises qui sont entreposées en douane puis réexportées. Toutefois, il peut y avoir de très grands écarts de temps entre l'entrée des marchandises dans les entrepôts en douane et leur déclaration comme importations; certaines expéditions entreposées en douane y restent pendant plusieurs mois avant d'être dédouanées. Une étude plus détaillée de ce changement figure aux pages 14 sous le titre "Nouvelle base régissant la statistique du commerce".

(d) **Exclusions:** Les mouvements de marchandises suivants sont exclus des statistiques des exportations et des importations (certains de ceux-ci sont classés séparément comme "transactions spéciales – non commerciales"): l'or et les articles en or, lorsque la valeur de la teneur en or représente 80 p. 100 ou plus de la valeur totale (une petite quantité de débris d'or sous forme de balayure de bijoutiers est incluse dans la classe d'exportation 256-99 et dans la classe d'importation 258-99); la monnaie courante; les effets des immigrants; les dons et cadeaux privés; les achats des touristes (seuls les articles exempts des droits de douane lors de leur importation sont exclus de la statistique des importations); les marchandises expédiées aux forces armées et aux diplomates du Canada à l'étranger, ou celles qui sont expédiées par ces personnes; les marchandises expédiées aux forces armées de nos alliés de l'OTAN et aux diplomates étrangers au Canada ou celles qui sont envoyées au Canada par ces personnes; les expéditions provisoires de marchandises pour les expositions et les concours (et les films expédiés en vue de leur projection ou de leur développement); les approvisionnements de soutes et de navire vendus aux navires ou aéronefs étrangers dans les bureaux canadiens ou achetés par des navires ou aéronefs canadiens à l'étranger; en général, tous les autres mouvements temporaires et les marchandises en transit.

Sont également exclus des statistiques des importations les navires de construction et d'immatriculation britanniques importés en vue de leur usage au Canada et les navires et aéronefs achetés en vue d'être utilisés comme appareils de transport internationaux, mais non pour transporter des marchandises d'un endroit à l'autre au Canada.

Sont aussi exclues des statistiques des exportations les marchandises exportées à nos alliés de l'OTAN et financées en vertu des lois des subsides pour la défense. Voici la valeur de ces transferts:

Année civile	Dollars
1955	165,922,000

1961	23,036,000
1962	19,079,000
1963	2,984,000
1964	31,328,000

La note spéciale "Modifications apportées à la couverture statistique du commerce", à la page 11, décrit les modifications d'application.

4. Pays de destination

Les exportations sont portées au compte du pays destinataire au départ du Canada, c'est-à-dire du dernier destinataire connu.

Imports are credited to the country from which the goods were first directed to Canada, except for goods of Central or South American origin consigned to Canada from the United States; in these cases, the goods are credited to the country of origin.

5. Values

Export entries define the value of exports as the "actual amount received or to be received in terms of Canadian dollars, exclusive of all charges" such as freight, insurance, handling, etc. This definition would give values f.o.b. point of consignment for export, but in practice it is not always followed. For instance, in recent years a significant but indeterminate proportion of exports has been reported in United States dollars. This has resulted in some overstatement of the value of exports for the period prior to June 1961 and some understatement of their value in the subsequent period.

The value of goods imported is usually the value as determined for customs duty. In most cases, this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized rates of exchange (usually the commercial rate prevailing on the date when the goods were actually despatched to Canada). The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but in recent years importers have often reported c.i.f. values for free goods or goods subject to specific rates of duty. There is therefore some tendency for the value of these imports to be overstated. An effort is, however, made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January 1959); raw cotton and crude petroleum (from January 1962, retroactive to January 1960); raw sugar (from January 1963, retroactive to January 1961); and all shipments individually valued at $100,000 or more (from January 1964). Only about one fifth of the value of imports is covered by these specific checks.

These valuation problems were revealed by studies connected with the introduction of the new commodity classifications for export and import statistics and by the sharp fall in the value of the Canadian dollar in 1961. Some action has since been taken to reduce the distortion of export and import values.

6. Ports

Tables 11 and 12 (trade by ports and provinces) show totals of the trade cleared by customs at individual customs ports. This does not imply that exports cleared at particular ports originated at those ports or even in the province in which the port concerned is located. Neither does it imply that imports cleared at particular ports were for consumption at those ports or even in the province in which the port is located. Interprovincial movements frequently occur before or after customs clearance.

7. Abbreviations

The letters "n.e.s." mean "not elsewhere specified".

8. Revisions

The data presented in this volume supersede those published in earlier issues of this volume. (Please see also the special notes "New Basis of Compiling Trade Statistics" and "Changes in Coverage of Trade Statistics" on pages 14 and 11). The detail of revisions is published on coloured pages inserted at the beginning of monthly export and import reports.

Les importations sont portées au compte du premier pays où l'expédition a été faite à destination du Canada, sauf dans le cas des marchandises en provenance de l'Amérique centrale ou de l'Amérique du Sud qui sont expédiées au Canada à partir des États-Unis et qui sont comptées comme importées de leur pays d'origine.

5. Valeur

Les documents d'exportations définissent la valeur des exportations comme "la somme réelle reçue ou à recevoir en dollars canadiens, à l'exclusion de tous les frais" (de transport, d'assurance, de manutention, etc.). Selon cette définition la valeur des exportations serait la valeur f. à b. point de destination, mais en réalité cette règle n'est pas toujours respectée. Par exemple, ces dernières années, une proportion notable mais dont on ne connaît pas le chiffre exact des exportations a été déclarée en dollars américains. Il en est découlé une certaine surestimation de la valeur des exportations au cours de la période antérieure à juin 1961 ainsi qu'une sous-estimation de leur valeur dans la période qui a suivi.

La valeur des marchandises importées est habituellement la valeur retenue pour le calcul des droits de douane. Dans la plupart des cas, elle correspond à la valeur indiquée sur la facture, après conversion en dollars canadiens au cours officiel (ordinairement le cours commercial en vigueur à la date à laquelle les marchandises ont été effectivement expédiées au Canada). La loi canadienne sur les douanes exige en général que la valeur des marchandises soit indiquée f. à b. point d'expédition du pays exportateur, mais, au cours des dernières années, les importateurs ont souvent déclaré la valeur c.a.f. dans le cas des marchandises exemptes de droits ou des marchandises auxquelles s'appliquent des taux de douane particuliers. Il existe donc une certaine tendance à surestimer la valeur de ces importations. Toutefois, on s'efforce de veiller à ce que la valeur f. à b. soit bien utilisée dans les statistiques des importations dans les cas suivants: marchandises sujettes aux droits de dumping (à partir de janvier 1969); coton brut et pétrole brut (à partir de janvier 1962, rétroactif janvier 1960); sucre brut (à partir de janvier 1963, rétroactif janvier 1961); et toutes les expéditions individuelles d'une valeur de $100,000 ou plus (à partir de janvier 1964). Ces contrôles ne visent qu'environ un cinquième, en valeur, des marchandises importées.

Les problèmes de l'évaluation sont apparus lors des études sur l'adoption d'une nouvelle classification des marchandises pour la statistique des exportations et des importations et à la suite de la forte baisse du dollar canadien en 1961. Depuis, on a pris des mesures en vue de réduire les risques de fausser les chiffres relatifs à la valeur des exportations et des importations.

6. Ports

Les tableaux 11 et 12 (commerce suivant le port et la province) donnent les totaux des marchandises dédouanées dans chaque port douanier. Il ne faut pas conclure que les exportations dédouanées dans un port en particulier proviennent de cet endroit ni même de la province dans laquelle le port est situé. Par ailleurs, les importations dédouanées dans un port quelconque ne sont pas obligatoirement destinées à la consommation à cet endroit ni même dans la province où le port est situé. Les mouvements interprovinciaux surviennent souvent avant ou après le dédouanement des marchandises.

7. Abréviations

Les lettres "n.d.a." signifient "non dénommé ailleurs".

8. Rectifications

Le présent rapport annule et remplace les numéros précédents. (Veuillez également voir les notes spéciales "Nouvelle base de la statistique du commerce" et "Modifications apportées à la couverture de la statistique du commerce" aux pages 14 et 11). Le détail des rectifications paraît aux pages de couleur au début des rapports annuels sur les exportations et les importations.

Changes in Coverage of Commodity Statistics

Effective January 1, 1960, a new category of export and import transactions was established under the heading of "Special Transactions—Non-trade". These transactions are excluded from the trade totals, but are published for the convenience of users of this information. The commodity classes contained in this category are as follows:

Class	Description	Former treatment	
		Exports	Imports
990-05 to 990-65	Gold and current coin	excluded	excluded
995-10	Settlers' effects	included	included
995-12	Private donations and gifts	included	included
995-14	Identifiable tourist purchases	partly included	included
995-81	Goods exported to Canadian diplomatic representatives or Canadian armed forces stationed abroad	excluded	largely included
995-83	Goods exported for exhibition or competition and intended to be returned to Canada	excluded	excluded
995-85 and 995-89	Photographic film moving for exhibition or processing without sale	partly included	partly included

Of these classes, settlers' effects and private donations and gifts were included in the total trade prior to 1960. Movements of goods for Canadian armed forces and diplomats abroad were excluded from export totals but movements of goods for foreign armed forces or diplomats in Canada were largely included in import totals. Tourist purchases in Canada were recorded in the appropriate export commodity classes and duty—exempt Canadian tourists' purchases abroad were recorded in a separate import class, both types of transactions being included in the trade totals. But while all duty-exempt Canadian tourists' purchases abroad were recorded, the coverage of tourist purchases in Canada was limited to those transactions for which customs export entries are normally required (mail and express shipments only). Photographic film exported or imported without sale was only partly included in the trade totals. Exports and imports of gold and current coin, and temporary movements of goods for exhibition or competition were excluded from the trade totals.

Thus, prior to 1960 the published totals included various commodity movements which either have no international financial implications or, for various reasons, are better considered separately from merchandise trade in economic analysis. Furthermore, some of these transactions did not receive uniform treatment in export and import statistics. The removal of these transactions from export and import totals on a uniform basis has greatly improved balance of trade calculations derived directly from these statistics.

Modifications apportées à la couverture statistique des marchandises

A compter du 1er janvier 1960, une nouvelle catégorie de transactions d'exportations et d'importations a été établie sous la rubrique "Transactions spéciales—hors-commerce". Ces transactions sont exclues des totaux du commerce mais sont publiées pour accommoder les intéressés. Les classes de marchandises de cette catégorie sont les suivantes:

Classe	Description	Traitement antérieur	
		Exportations	Importations
990-05 à 990-65	Or et monnaie courante	exclus	exclus
995-10	Effets des colons	inclus	inclus
995-12	Dons et cadeaux particuliers	inclus	inclus
995-14	Achats identifiables des touristes	partiellement inclus	inclus
995-81	Marchandises expédiées aux représentants diplomatiques canadiens ou aux forces armées canadiennes à l'étranger	exclus	en grande partie inclus
995-83	Marchandises exportées pour exposition ou concours et devant revenir au Canada	exclus	exclus
995-85 et 995-89	Mouvements de films photographiques en vue d'expositions ou de développement sans qu'il y ait vente	partiellement inclus	partiellement inclus

Parmi ces classes, les effets des colons et les dons et cadeaux particuliers étaient inclus dans les totaux du commerce, antérieurement à 1960. Les mouvements de marchandises destinées aux forces armées et aux diplomates canadiens à l'étranger étaient exclus des exportations, mais ceux des marchandises destinées aux forces armées et aux diplomates étrangers au Canada étaient en grande partie inclus dans les totaux des importations. Les achats des touristes au Canada s'inscrivaient dans les classes appropriées de marchandises exportées et les achats en franchise s'inscrivaient dans une classe d'importation distincte, les deux formes de transactions étant incluses dans les totaux du commerce. Mais alors que tous les achats en franchise des Canadiens à l'étranger étaient inscrits, la couverture des achats des touristes au Canada se limitait aux transactions exigeant normalement des inscriptions des ports douaniers (expéditions par la poste et les messageries seulement). Les films photographiques exportés ou importés sans être vendus, n'étaient inclus qu'en partie dans les totaux du commerce. Les exportations et les importations d'or et de monnaie courante et les mouvements temporaires de marchandises destinées aux expositions ou concours étaient exclus des totaux du commerce.

Ainsi, jusqu'à 1960, les totaux publiés comprenaient divers mouvements de marchandises qui n'ont aucune implication internationale ou qu'il vaut mieux, pour diverses raisons, isoler du commerce des marchandises pour l'analyse économique. De plus, la statistique des exportations et des importations n'a pas traité uniformément certaines de ces transactions dont la disparition des chiffres des exportations et des importations d'après une base uniforme, a sensiblement amélioré les calculs de la balance des échanges tirés directement de cette statistique.

TREATMENT OF GOLD IN CANADIAN TRADE STATISTICS

The general use of gold as a money metal gives it special attributes which distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors and therefore may fluctuate widely from period to period owing to other than ordinary trade or commercial considerations. Also gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed minimum price.

Furthermore, physical movements of gold between countries have no direct or normal relation to sales and purchases. International transactions in gold often occur without its moving across any frontier, the sales or purchases in such cases being recognized by simply setting aside or "earmarking" the gold in the vaults of a central bank. As trade statistics deal only with physical movements of commodities, they would not record all changes in stocks of gold under earmark. Yet such gold transactions would not be different in their economic nature from many physical shipments.

For these reasons movements of gold in a primary or semi-fabricated state have been excluded from published totals of Canada's commodity trade. From January 1, 1952, the standard of exclusion in use has been that suggested by the International Monetary Fund and the United Nations Statistical Office: all gold and gold products in which the value of the gold is 80 per cent or more of the total value are excluded. The only exception to this rule is the gold content of jewellers' sweepings which are included in the appropriate commodity classes (256-99 for exports and 258-99 for imports).

Since gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is prepared by the Bank of Canada and published monthly as a supplement to the trade statistics. This series is the equivalent of gold production in Canada exclusive of gold held by producers before the refining stage (whether at the mine, in transit, or at the Mint) and less any gold consumed by industry in Canada out of current production (normally a minor part of the total). Since November 1, 1951, the series has also excluded increases in commercial gold stocks held in safe-keeping by the Mint for the account of the mines.

Since March 21, 1956, mines not receiving aid under the Emergency Gold Mining Assistance Act have been allowed to sell their gold to private residents and non-residents, either for export or for safe-keeping in Canada. From April, 1956, such sales have been included in the figures for new gold production available for export.

The United States has been for many years the chief market for Canada's gold production, but such commercial exports of gold as now occur are normally directed to other markets.

For many years the only published series on gold trade was new gold production available for export. When the coverage of trade statistics was revised in 1960, records of physical movements of gold were added to the new category of "Special Transactions—Non-trade", and are now published in monthly and annual export and import reports. Statistics of new gold production available for export, as in the old series (Table I); and those of gold exports, as in the new series (Table II), are given in the following tables.

TRAITEMENT DE L'OR DANS LA STATISTIQUE DU COMMERCE DU CANADA

L'emploi général de l'or comme métal monétaire lui confère des attributs spéciaux qui le distinguent des autres denrées dans le commerce. Ainsi, en particulier, les mouvements internationaux d'or, étant largement déterminés par des facteurs d'ordre monétaire, peuvent beaucoup fluctuer d'une période à l'autre pour des raisons autres que les raisons ordinaires d'ordre commercial. En outre, l'or est généralement accepté; il n'a pas à surmonter les barrières tarifaires et trouve normalement marché à un prix minimum fixe.

De plus, les mouvements matériels d'or entre pays ne se rattachent pas directement ni normalement aux ventes et achats. Les opérations internationales intéressant l'or s'exécutent souvent sans que l'or franchisse la frontière; en pareil cas, les ventes ou achats sont reconnus simplement par la mise de côté ou "l'affectation" d'or dans les chambres fortes d'une banque centrale. Comme la statistique du commerce porte uniquement sur les mouvements matériels des denrées, elle ne saurait enregistrer tous les changements apportés à l'or ainsi affecté. Et pourtant, de telles opérations ne diffèrent pas au point de vue économique d'un grand nombre d'expéditions matérielles.

Voilà pourquoi les mouvements d'or brut ou semi-ouvré n'ont pas été publiés dans la statistique du commerce canadien de marchandises. Depuis le 1er janvier 1952, la règle adoptée est celle qu'ont proposée le Fonds monetaire international et le Bureau de la statistique des Nations Unies: exclure tout l'or et tous les produits aurifères dans lesquels la valeur de l'or constitue 80 p. 100 ou plus de la valeur totale. Seule fait exception la teneur en or des balayures de bijoutier lesquelles sont classées dans les catégories appropriées de marchandises (classe 256-99 à l'exportation et classe 258-99 à l'importation).

Comme l'or est avant tout produit au Canada comme denrée d'exportation, la Banque du Canada prépare et publie à tous les mois comme supplément de la statistique du commerce, une série indiquant la production d'or neuf devant être exporté. Cette série équivaut à la production d'or au Canada, à l'exclusion de l'or détenu par les producteurs avant l'affinage (à la mine, en cours de route ou à la Monnaie) et de l'or consommé par l'industrie au Canada et prélevé sur la production courante (normalement une petite partie du total). Depuis le 1er novembre 1951, la série a aussi fait exclusion des augmentations de stocks d'or gardés en sûreté par la Monnaie pour le compte des mines.

Depuis le 21 mars 1956, les mines qui ne reçoivent pas d'aide en vertu de la loi d'urgence sur l'aide à l'exploitation des mines d'or, ont été autorisées à vendre leur or à des particuliers résidants ou non résidants, soit pour l'exportation, soit pour le conserver en sûreté au Canada. Depuis avril 1956, ces ventes ont été incluses dans les chiffres sur la production d'or neuf destiné à l'exportation.

Les États-Unis sont depuis plusieurs années le principal marché de l'or produit au Canada, mais les exportations commerciales d'or comme il en est aujourd'hui se dirigent normalement vers d'autres marchés.

Pendant plusieurs années, la production d'or neuf exportable constituait la seule série statistique publiée et visant le commerce de l'or. Quand, en 1960, on a modifié le champ d'application de la statistique du commerce, on a ajouté la statistique des mouvements matériels d'or à la nouvelle catégorie "Transactions spéciales—non commerciales"; ces chiffres paraissent aujourd'hui dans les rapports mensuels et annuels des exportations et importations. Les statistiques sur la production d'or neuf destiné à l'exportation, tout comme dans l'ancienne série statistique, sont données dans le premier tableau, tandis que les statistiques relatives aux exportations d'or, étant une nouvelle série statistique, paraissent dans le second tableau.

NEW BASIS OF COMPILING TRADE STATISTICS

(Effective January 1, 1964)

Trade can conveniently be recorded at two points. One in the national frontier, the point at which goods enter into or pass beyond the control of the national government. The other is the "custom frontier", the point at which imports leave customs supervision or exports enter it. Records taken at the national boundary are known as "General Trade" statistics; records taken at the customs boundary as "Special Trade" statistics. Statistics of the same trade compiled in these two ways can differ in both magnitude and timing.

The chart below illustrates the principal flows involved in these two systems of compiling trade statistics. The arrows in the chart indicate the following movements of goods:

(1) Most imports cross the national boundary and are immediately (or within a few days) cleared through customs for domestic use.

(2) A growing proportion of imports crosses the national boundary and is then stored in a customs warehouse under customs supervision, rather than being cleared for domestic use. Some countries also have "free ports" and bonded processing establishments which are analogous to customs warehouses, but these are not now used in Canada.

(3) Most of the goods stored in customs warehouses are eventually cleared through customs for domestic use, but only after some weeks or months have passed.

(4) Most exports leave the domestic economy and immediately pass beyond the national boundary.

(5) A small proportion of exports consists of goods entered into customs warehouses and later re-exported without ever having been cleared for domestic use.

(6) Direct transit trade consists of goods which enter the national territory with the purpose of passing to some other country. These goods remain under customs supervision as long as they are within the national boundary. There are no statistical records of this movement.

NOUVELLE BASE DE LA STATISTIQUE DU COMMERCE

(En vigueur le 1er janvier 1964)

Les échanges commerciaux peuvent être enregistrés commodément à deux endroits, dont la frontière du pays, endroit où les marchandises tombent sous le contrôle du gouvernement national ou passent au-delà, et la frontière douanière, endroit où les importations sortent du contrôle de la douane et les exportations y entrent. Les données consignées à la frontière nationale s'appellent statistiques du "commerce général" et les données consignées à la frontière douanière, statistiques du "commerce spécial". Les statistiques du même commerce établies de ces deux façons peuvent différer quant à leur ampleur et à la périodicité.

Le graphique ci-dessous illustre les principaux mouvements que supposent les deux systèmes de calcul. Les flèches indiquent les mouvements suivants des marchandises:

(1) La plupart des importations passent par la frontière nationale; elles sont immédiatement (ou dans les quelques jours) dédouanées pour consommation intérieure.

(2) Une proportion croissante d'importations passe la frontière nationale pour être ensuite entreposée sous la surveillance de la douane plutôt que dédouanée pour consommation intérieure. Certains pays ont aussi des "ports libres" et des établissements de transformation analogues aux entrepôts douaniers; il n'en existe pas au Canada.

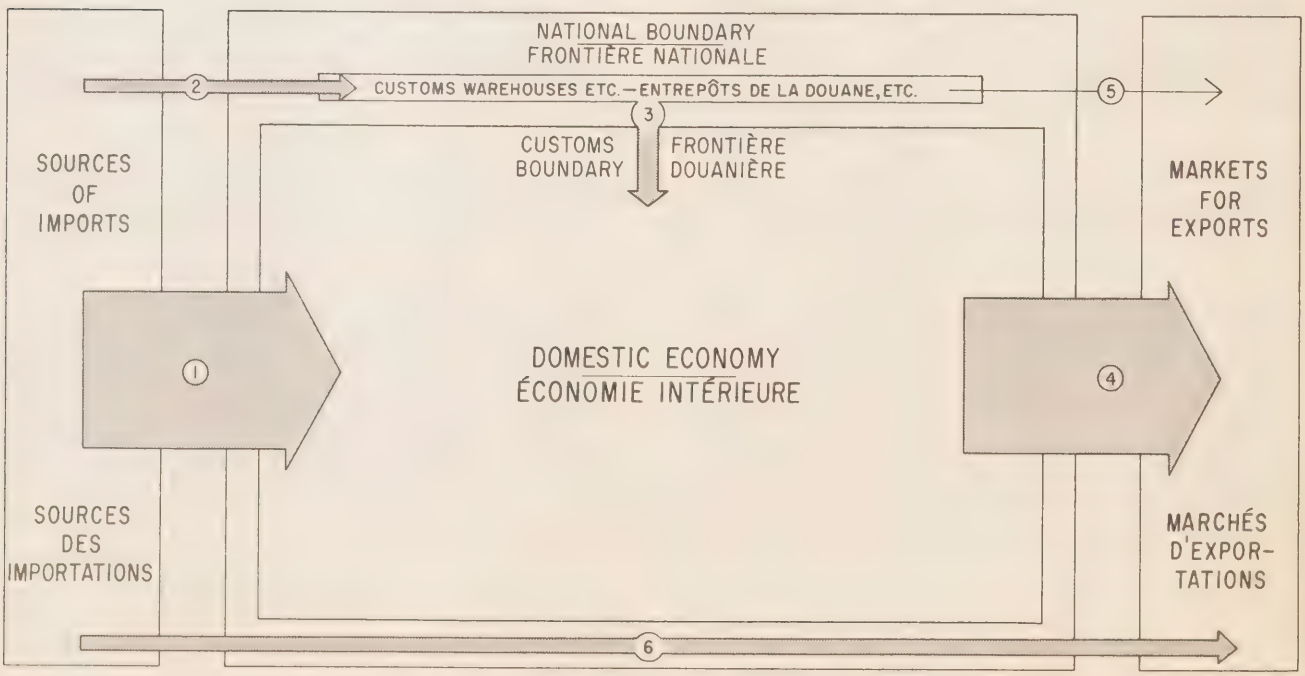

(3) La plupart des marchandises entreposées à la douane sont éventuellement dédouanées pour consommation intérieure, mais après un certain nombre de semaines ou de mois.

(4) La plupart des exportations quittent l'économie intérieure et passent immédiatement au-delà de la frontière nationale.

(5) Une petite proportion des exportations se compose de marchandises entrées dans les entrepôts douaniers et plus tard réexportées sans jamais avoir été dédouanées pour consommation intérieure.

(6) Le commerce en transit direct se compose de marchandise qui pénètrent en territoire national en vue de leur expédition vers quelque autre pays. Ces marchandises demeurent sous le contrôle de la douane aussi longtemps qu'elles sont en territoire national. Il n'existe pas de statistiques de ce mouvement.

THE FLOW OF FOREIGN TRADE
LE MOUVEMENT DU COMMERCE ÉTRANGER

Until 1964, Canada's trade statistics were of the "Special Trade" type. Imports therefore included the movements indicated by arrows 1 and 3, exports the movement indicated by arrow 4. As of January 1, 1964, Canada's trade statistics are being compiled on the "General Trade" basis. Imports therefore include the movements indicated by arrows 1 and 2, exports the movements indicated by arrows 4 and 5. Direct transit trade (arrow 6) is not included in statistics under either the Special Trade or the General Trade system.

Until recently it appeared to make little difference whether Canadian trade was recorded on one basis or the other. During the period 1952-1961, goods passing through customs warehouses fluctuated between 3.1% and 2.4% of all imports, and re-exports from customs warehouses exceeded $5 million only in 1952, 1953 and 1961. Although from 1955 there was an apparent growth in warehouse stocks each year, the amounts involved were small, exceeding $10 million only in 1956 and 1959.

This situation changed when surcharges were imposed on most imports in June, 1962, as a temporary exchange conservation measure. Importers who had not previously used customs warehousing facilities began to keep stocks in customs warehouses in the hope that the surcharges would be cancelled before the goods were required. In some cases importers found that this step reduced their costs, since money no longer had to be borrowed to pay import duties in advance of the time that goods were actually required. The result was a sharp increase in the proportion of imports passing through customs warehouses, and increase which continued even after the cancellation of the surcharges in April, 1963. Imports entered into customs warehouses rose from $143 million in 1961 to $188 million in 1962 and $284 million in 1963.

This change began to create statistical problems in the latter part of 1962. There was an increase in discrepancies between Canadian records of trade in certain commodities and the statistics of partner countries. This raised the question as to whether Canada's statistics would be more useful if related to actual goods movements rather than to the technicalities of customs clearance. When it became clear that the trend towards an increased use of customs warehouses was continuing even after the cancellation of the surcharges, it was decided to change the basis on which Canadian trade statistics were compiled.

Over a period of years, the totals of Canadian exports or imports will be almost the same on either the General Trade or Special Trade basis, because of the negligible size of exports ex-warehouse. There can be a significant difference in import totals for individual years because goods which are entered into warehouse in one calendar year may not be cleared until the following year, and warehouse stocks may fluctuate in size with movements in interest rates or in general business activity. There is likely to be a measurable change in the seasonal variation of monthly import totals. It is generally true that more goods are entered into customs warehouses than are cleared from warehouse during the months when the St. Lawrence system is open for navigation, and that more goods are cleared from than entered into warehouse when the St. Lawrence system is closed. The change in the basis of recording import statistics will therefore tend to accentuate the existing seasonal fluctuation of the import totals.

It will not be feasible to adjust detailed statistics of Canadian trade for 1963 and earlier years to the new basis. Totals calculated on both systems were published in the 1964 monthly bulletin "Summary of Foreign Trade" (DBS Catalogue No. 65-001). Other monthly and quarterly Trade of Canada publications show General Trade (new basis) figures for 1964, but comparative figures for 1963 and earlier years remain on the Special Trade basis on which they were originally compiled.

Jusqu'à 1964, les statistiques du commerce du Canada étaient du type "commerce spécial". En conséquence, les importations comprenaient les mouvements indiqués par les flèches 1 et 3, et les exportations, les mouvements indiqués par la flèche 4. À compter du 1er janvier 1964, les statistiques du commerce du Canada se fondent sur le "commerce général". En conséquence, les importations comprennent les mouvements indiqués par les flèches 1 et 2, les exportations, les mouvements indiqués par les flèches 4 et 5. Le commerce "en transit direct" (flèche 6) ne figure ni dans les statistiques du commerce spécial ni dans celles du commerce général.

Jusqu'à récemment il semblait plutôt indifférent que le commerce du Canada fût consigné suivant l'une ou l'autre base. Durant la période de 1952-1961 les marchandises passant par les entrepôts de la douane ont varié entre 3.1 p. 100 et 2.4 p. 100 de toutes les importations, et les réexportations à partir des entrepôts n'ont surpassé cinq millions de dollars qu'en 1952, 1953 et 1961. Bien qu'à compter de 1955 les stocks en entrepôt aient apparemment augmenté chaque année, les montants ont été très minimes n'excédant 10 millions de dollars qu'en 1956 et 1959.

La situation a changé lors de l'imposition d'une surtaxe sur la plupart des importations, en juin 1962, comme mesure temporaire de conservation du change. Les importateurs qui antérieurement n'avaient pas utilisé les aménagements d'entreposage douaniers commencèrent d'y laisser les stocks dans l'espoir que les surtaxes seraient révoquées avant qu'ils aient besoin des marchandises. Dans certains cas les importateurs ont constaté que cette mesure réduisait leurs frais, puisqu'ils ne devaient plus emprunter pour payer les droits d'importation avant d'avoir effectivement besoin des marchandises. Il en est résulté une montée en flèche de la proportion d'importations passant par les entrepôts, augmentation qui a persisté même après l'abolition des surtaxes, en avril 1963. De 143 millions de dollars qu'elles étaient en 1961, les importations qui sont entrées dans les entrepôts sont passées à 188 millions en 1962 et à 284 millions en 1963.

Le changement a commencé à créer des problèmes à la fin de 1962. Les discordances augmentaient entre les registres du commerce canadien dans le cas de certaines marchandises et les statistiques des pays partenaires. On s'est demandé si les statistiques du Canada seraient plus utiles si elles se rapportaient aux mouvements réels des marchandises plutôt qu'aux technicalités du dédouanement. Lorsqu'il est devenu évident que même aprés la disparition des surtaxes la tendance persistait vers l'usage de plus en plus général des entrepôts, il a été décidé de modifier la base de calcul des statistiques du commerce canadien.

Pendant un certain nombre d'années, les chiffres des exportations ou des importations canadiennes seront à peu près identiques sur l'une ou l'autre base du commerce général ou du commerce spécial, en raison du peu d'importance des exportations à partir des entrepôts. Chaque année, les chiffres des importations peuvent varier sensiblement parce que des marchandises mises en entrepôt au cours d'une année civile peuvent n'être dédouanées que l'année suivante et les stocks des entrepôts peuvent varier en fonction des fluctuations des taux d'intérêt ou de l'activité commerciale en général. Il se produira probablement un changement mensurable de la variation saisonnière du chiffre mensuel des importations. Il est reconnu, en général, qu'il entre plus de marchandises dans les entrepôts douaniers qu'il n'en sort durant les mois où la voie maritime du St-Laurent est ouverte à la navigation et qu'il en sort plus qu'il n'en entre lorsqu'elle est fermée. La modification à la base de l'enregistrement statistique des importations tendra donc à accentuer les fluctuations saisonnières existantes des chiffres des importations.

Il ne sera pas possible d'adapter les statistiques détaillées du commerce du Canada de 1963 à la nouvelle base. Les chiffres établis d'après les deux systèmes ont été publiés dans le bulletin mensuel de 1964 du B.F.S. *Summary of Foreign Trade* numéro de catalogue 65-001. Les autres publications mensuelles et trimestrielles sur le Commerce du Canada donnent, pour 1964, les chiffres du commerce général (nouvelle base), mais les chiffres comparatifs pour 1963 et les années antérieures demeurent sur la base du commerce spécial, d'après laquelle ils ont été initialement établis.

The following table presents import totals on the old and new bases for the period 1952-1963 and illustrates the main flows involved in this change of systems.

Le tableau qui suit donne les chiffres des importations suivant les deux bases pour la période de 1952-1963 et illustre les principaux mouvements que suppose le changement de système.

NEW EXPORT COMMODITY CLASSIFICATION

Effective January 1, 1961, a new Export Commodity Classification was introduced. This new classification is based on the Standard Commodity Classification which was developed in the Dominion Bureau of Statistics as a tool for integrating statistical series derived from different sources.

The new Export Commodity Classification differs greatly from the former Statistical Classification—Exports. The old classification classified commodities primarily according to the material of which they were chiefly composed (component material); the new classification groups commodities primarily according to stage of processing and purpose. It is divided into seven sections, as follows:

Section	Title	Classes
I	Live Animals	1-19 to 9-99
II	Food, Feed, Beverages and Tobacco	11-09 " 183-99
III	Crude Materials, Inedible	201-10 " 291-99
IV	Fabricated Materials, Inedible	300-12 " 490-99
V	End Products, Inedible	500-19 " 960-99
VI	Special Transactions—Trade	970-10 " 970-75
VII	Special Transactions—Non-trade	990-05 " 995-89

Section I contains all live animals except live fish and other sea foods shipped for food, which are included in Section II.

Section II contains all commodities whose chief end use is as food, feed, beverages and tobacco. Within this section, the commodities are further classified by component material and stage of processing.

Section III contains all commodities whose chief use is as materials for industry, and which have not been processed beyond the stage of cleaning, sorting or concentrating. Within this section, the commodities are further classified chiefly by component material.

Section IV contains all commodities which have passed the preliminary stages of processing but which are still used chiefly as materials in some later industrial process. All commodities included in this section will be processed further before reaching the form in which their end use is served. Within this section, the commodities are further classified chiefly by component material.

Section V contains all commodities which will not lose their identity through further processing and which are commonly regarded as articles rather than as materials, together with finished identifiable parts, attachments and accessories of these commodities. Within this section, the commodities are further classified chiefly by principal use or function.

Section VI contains special transactions, essentially commercial in nature, which are not classified by commodity in trade statistics. The value of these transactions is included in export totals.

Section VII is described fully in "Changes in Coverage of Commodity Statistics", on page 11.

The introduction of the new Export Commodity Classification, made it difficult to compare commodity totals for 1961 with those for earlier years. Even where the content of a 1961 commodity class was the same as that of a 1960 class there were differences in codes and often in descriptions which

NOUVELLE CLASSIFICATION DES MARCHANDISES D'EXPORTATION

A compter du 1er janvier 1961, une nouvelle classification des marchandises d'exportation a été établie. Cette nouvelle classification se fonde sur la classification type des marchandises, qui fut mise au point par le Bureau fédéral de la statistique comme instrument à utiliser pour intégrer la série statistique obtenue de différentes sources.

La nouvelle classification des marchandises d'exportation diffère grandement de l'ancienne, qui classait les produits essentiellement selon la matière principale dont ils se composaient (l'élément principal); au contraire, la nouvelle, groupe les produits essentiellement selon le degré de transformation et selon l'usage. Elle se divise en sept sections:

Section	Titre	Catégories
I	Animaux vivants	1-19 à 9-99
II	Aliments, provendes, boissons et tabacs	11-09 " 183-99
III	Matières brutes, non comestibles	201-10 " 291-99
IV	Matières travaillées, non comestibles	300-12 " 490-99
V	Produits finis, non comestibles	500-19 " 960-99
VI	Transactions spéciales—commerciales	970-10 " 970-75
VII	Transactions spéciales—hors-commerce	990-05 " 995-89

Section I englobe tous les animaux vivants, sauf les poissons vivants et autres fruits de mer expédiés comme aliments, lesquels sont compris dans la Section II.

Section II englobe tous les produits qui sont utilisés essentiellement comme aliments, provendes, boissons et tabac. Dans cette section, les produits sont classés selon l'élément principal et le degré de transformation d'une manière plus détaillée.

Section III englobe tous les produits qui sont utilisés essentiellement comme matières pour l'industrie et dont le degré de transformation n'a pas dépassé le stade du nettoyage, du triage et de la concentration. Dans cette section, les produits sont classés davantage selon l'élément principal surtout.

Section IV englobe tous les produits qui ont passé par les étapes préliminaires de la transformation, mais qui seront encore utilisés principalement comme matières dans quelque procédé industriel ultérieur. Tous les produits compris dans cette section seront transformés davantage avant d'atteindre la forme qui leur permettra de remplir leur usage ultime. Dans cette section, les produits sont classés davantage selon l'élément principal surtout.

Section V englobe tous les produits qui ne perdent pas leur identité par une transformation supplémentaire et qui sont tenus ordinairement pour des articles plutôt que pour des matières, ainsi que les pièces ouvrées identifiables et les accessoires de ces produits. Dans cette section, les produits sont classés davantage selon l'usage ou la fonction principale surtout.

Section VI englobe les transactions spéciales, de caractère essentiellement commercial, qui ne sont pas classées selon le produit dans la statistique du commerce. La valeur de ces transactions est comprise dans le total des exportations.

Section VII est expliquée au complet dans les "Modifications apportées à la couverture statistique des marchandises", page 11.

L'établissement d'une nouvelle classification des produits d'exportation ne permet pas facilement de comparer le total des marchandises de 1961 avec celui des années antérieures. Même dans les cas où la composition d'une catégorie de produits de 1961 était identique à celle d'une catégorie de 1960, il existait

des différences de codification et de description qui avaient tendance à rendre les comparaisons obscures. En vue d'aider les usagers à résoudre les problèmes de comparaison, une clé complète fut présentée dans le Commerce du Canada, Volume II: Exportations (pages 26-43).

NEW IMPORT COMMODITY CLASSIFICATION

Effective January 1, 1964, a new Import Commodity Classification (MCC) was introduced. This new classification is based on the Standard Commodity Classification which was developed in the Dominion Bureau of Statistics as a tool for integrating statistical series derived from various sources.

The MCC is divided into seven "Sections" as follows:

Section	Title	Classes
I	Live animals	1-19 to 9-99
II	Food, feed, beverages and tobacco	11-09 " 183-99
III	Crude materials, inedible	201-10 " 291-99
IV	Fabricated materials, inedible	301-10 " 496-99
V	End products, inedible	501-19 " 961-99
VI	Special transactions — Trade	970-10 " 970-99
VII	Special transactions — Non-trade	990-05 " 995-89

Section I contains all live animals except live fish and other seafoods shipped for use as food, which are included in Section II.

Section II contains all other commodities whose chief end use is as food, feed, beverages or tobacco. Because any commodity at one stage of processing is located in only one place in the classification, certain non-food grades of chiefly food commodities (e.g. seed wheat and seed potatoes) are classified in this section, and certain food grades of chiefly non-food commodities (e.g. edible tallow and vegetable oils) are excluded. Within this section the commodities are further classified by component material and stage of processing.

Section III contains all commodities whose chief use is as materials for industry, and which have not been processed beyond the stage of cleaning, sorting or concentrating, together with the synthetic equivalents of some natural materials. Waste and scrap materials which are principally used for the same purpose as particular crude materials are included with those materials; other waste and scrap materials are grouped at the end of the section. Within this section the commodities are further classified by component material.

Section IV contains all commodities which have passed the preliminary stages of processing but which are still used chiefly as materials in some later industrial process. Some commodities in this section are highly processed and the chief part of their value may be derived from manufacturing. But all have in common the basic characteristic of materials, i.e., they will be subjected to (or used up in) further industrial operations in the course of which their form will be changed or their identity lost. Within this section the commodities are further classified chiefly by component material.

Section V contains all commodities which will not lose their identity through further processing, and which are commonly regarded as articles rather than as materials, together with finished identifiable parts, attachments and accessories of these articles. Within this section the commodities are further classified chiefly by principal use or function.

Section VI contains certain essentially commercial transactions which are not, for various reasons, classified by commodity in trade statistics; some import packing, all goods previously exported from Canada which are returned to Canada within five years after having been exported, and small value shipments. The value of these transactions is included in published totals of Canadian imports.

NOUVELLE CLASSIFICATION DES MARCHANDISES D'IMPORTATION

Une nouvelle Classification des marchandises d'importation (C.M.I.) est entrée en vigueur le 1er janvier 1964. Elle se fonde sur la classification type des marchandises mise au point au Bureau fédéral de la statistique en vue de l'intégration des séries statistiques tirées de diverses sources.

La C.M.I. se répartit entre les sept "sections" suivantes:

Section	Titre	Classes
I	Animaux vivants	1-19 à 9-99
II	Aliments, provendes, boissons et tabacs	11-09 " 183-99
III	Matières brutes non comestibles	201-10 " 291-99
IV	Matières travaillées non comestibles	301-10 " 496-99
V	Produits finis non comestibles	501-19 " 961-99
VI	Transactions spéciales — commerciales	970-10 " 970-99
VII	Transactions spéciales — hors commerce	990-05 " 995-89

Section I contient tous les animaux vivants sauf le poisson vivant et autres fruits de mer expédiés pour usage alimentaire et qui sont compris dans la Section II.

Section II contient toutes les autres denrées qui servent principalement d'aliments, de provendes, de boissons ou de tabacs. Étant donné qu'une denrée à un stade de transformation ne se trouve qu'à un seul endroit dans la Classification, certaines qualités non alimentaires de denrées surtout alimentaires (e.g. blé de semence, pommes de terre de semence) sont classées dans la présente section et certaines qualités alimentaires de denrées surtout non alimentaires (suif comestible et huiles végétales) sont exclues. Dans la section même, les produits se subdivisent en outre suivant la matière constituante et le stage de fabrication.

Section III contient tous les produits qui servent principalement de matières premières dans l'industrie et qui n'ont pas été transformés au-delà du nettoyage, du triage ou de la concentration, de même que les équivalents synthétiques de certaines matières naturelles. Les déchets et les matières de rebut qui servent principalement à la même fin comme matières brutes particulières sont incluses dans ces matières; les autres déchets et rebuts sont groupés à la fin de la section. Dans la section même, les produits se subdivisent en outre suivant la matière constituante.

Section IV contient tous les produits qui ont passé par les premiers stades de la transformation mais qui servent encore principalement de matières à quelque fin industrielle ultérieure. Certaines marchandises de cette section sont très ouvrées et la majeure partie de leur valeur peut venir de leur transformation. Toutes, cependant ont en commun la caractéristique de base de matières, c.-à-d. qu'elles seront soumises (ou serviront) à de plus amples transformations industrielles au cours desquelles leur forme sera modifiée et leur identité perdue. Dans la section même, les produits se subdivisent en outre principalement suivant la matière constituante.

Section V contient toutes les marchandises qui ne perdront pas leur identité par une plus ample transformation et qui sont ordinairement tenues pour des articles plutôt que des matières ainsi que leurs pièces et accessoires. Dans la section même, les produits se subdivisent en outre principalement suivant leur usage ou leur fonction.

Section VI contient certaines transactions essentiellement commerciales qui, pour diverses raisons, ne se classent pas par marchandise dans la statistique du commerce; certains emballages d'importation, toutes les marchandises exportées antérieurement et retournées au Canada dans les cinq ans qui suivent leur exportation, et les expéditions de faible valeur. La valeur de ces transactions est comprise dans les totaux publiés des importations canadiennes.

Section VII contains certain transactions which do not have an international financial implication or which, for various reasons, are better considered separately from merchandise trade in economic analysis, e.g.: gold, settlers' effects and tourist purchases. The value of these transactions is not included in published totals of Canadian trade, but statistics are compiled because they have independent value.

The introduction of the Import Commodity Classification (MCC) in January, 1964 created serious difficulties in making accurate comparisons between statistics for 1964 and those for earlier years. To assist users in overcoming comparison problems, a complete convertibility key was presented in Trade of Canada: Volume III: Imports 1962-1964 (see pages 26-67). Copies of Convertibility Key are available on request to External Trade Division.

Section VII contient certaines transactions qui n'ont pas de signification financière internationale ou qu'il est préférable, pour diverses raisons, de traiter séparément du commerce des marchandises pour fin d'analyse économique, par exemple, l'or, les effets d'immigrants et les achats des touristes. La valeur de ces transactions n'est pas comprise dans les totaux du commerce canadien mais la statistique en est établie en raison de leur valeur indépendante.

L'entrée en vigueur de la Classification des marchandises d'importation (C.M.I.) en janvier 1964 a compliqué singulièrement l'établissement de comparaisons exactes entre la statistique de 1964 et celle des années antérieures. En vue d'aider les usagers à résoudre les problèmes de comparaison, une clef complète fut présentée dans le Commerce du Canada, Volume III: Importations 1962-1964 (pages 26-67). Copies de la Clé de Convertibilité sont disponibles sur demande à la division du commerce extérieur.

NEW COUNTRY CLASSIFICATION FOR EXTERNAL TRADE STATISTICS

A new classification of countries was introduced for export and import statistics as of January 1, 1960. The new classification is basically geographical: it divides the world into nine geographic regions, and within each region lists one sub-group of Commonwealth countries and a second of other countries. Statistics for earlier years presented in this report have been adjusted to conform with the new classification as far as possible.

The regions used in the new classification, and the order in which they are listed, are as follows:

Western Europe
Eastern Europe
Middle East
Other Africa
Other Asia
Oceania
South America
Central America and Antilles
North America

The arrangement of the regions was determined by the convenience of listing the United Kingdom first when presenting statistics of commodities by countries, and the United States last, directly above the commodity totals. This arrangement of country detail is traditional in Canadian trade reports, and has proven useful in permitting ready reference to details of trade with Canada's two leading trading partners.

The countries included in each region are shown on the following pages. In Canadian statistics the territory of any country is considered to be the geographic area of the country unless otherwise stated; that is, it includes both the customs area of the country and also any free areas in which customs control may not be exercised. Countries with which Canada's trade is small are grouped with contiguous or related areas.

The adoption of a new country classification facilitated extensive changes in the country names and the extent of country detail shown in Canadian trade statistics. The drafting of these changes was guided by two criteria, which will also be used to guide future revisions to the classification:

1. Total trade between Canada and each country specified should exceed $100,000 per year.
2. Available documentation must be adequate to compile accurate statistics of trade between Canada and each country specified.

NOUVELLE CLASSIFICATION DES PAYS POUR LA STATISTIQUE DU COMMERCE EXTÉRIEUR

Le 1er janvier 1960, on a établi une nouvelle classification des pays pour la statistique des exportations et des importations. La nouvelle classification est fondamentalement d'ordre géographique: elle divise le monde en neuf régions géographiques et à l'intérieur de chaque région, groupe les pays du Commonwealth en un sous-groupe et les autres pays en un second sous-groupe. La statistique antérieure qui paraît dans le présent rapport a été rectifiée autant que possible conformément à la nouvelle classification.

Voici les régions utilisées dans la nouvelle classification et en outre, l'ordre dans lequel elles sont énumérées:

Europe occidentale
Europe orientale
Moyen-Orient
Autres pays d'Afrique
Autres pays d'Asie
Océanie
Amérique du Sud
Amérique centrale et Antilles
Amérique du Nord

L'ordre de l'énumération des régions a été établi de façon à indiquer d'abord le Royaume-Uni dans la présentation de la statistique des marchandises selon les pays, et, les États-Unis en dernier, directement au-dessus des totaux de marchandises. Cette disposition des pays est traditionnelle dans les rapports du commerce du Canada et s'est révélée utile, car elle permet de se référer rapidement aux données du commerce du Canada avec ses deux principaux partenaires commerciaux.

Les pays compris dans chaque région sont énumérés aux pages suivantes. Dans la statistique du Canada, on estime que le territoire de n'importe quel pays est la région géographique du pays à moins d'indication contraire: c'est-à-dire que la région comprend et la région douanière du pays et toutes les régions libres où les règlements douaniers ne peuvent être appliqués. Les pays avec lesquels le commerce canadien est peu important sont groupés avec les régions avoisinantes ou similaires.

L'adoption d'une nouvelle classification des pays a facilité les modifications importantes apportées aux noms des pays et à la portée des données présentées dans la statistique du commerce du Canada. Ces changements ont été établis suivant deux critères qui seront aussi utilisés dans les prochaines revisions de la classification:

1. La valeur du commerce total entre le Canada et chaque pays énuméré doit atteindre plus de $100,000 par année.
2. La documentation disponible doit être appropriée en vue de permettre d'établir la statistique exacte du commerce entre le Canada et chaque pays mentionné.

[1] A new Export Commodity Classification became effective January 1, 1961. While converting the groups under the old to the sections under the new classification for the period prior to that date, certain adjustments had to be made. Section totals given in this table with respect to that period may not, therefore, agree with those given in other tables.

[1] Une nouvelle Classification des marchandises d'exportation est entrée en vigueur le 1er janvier 1961. Lors de la substitution des sections de la nouvelle sification aux groupes de l'ancienne pour la période antérieure à cette date, certains ajustements ont dû être faits. Cela explique l'écart possible entre les res relatifs à cette période et les chiffres d'autres tableaux.

[1] A new Import Commodity Classification became effective January 1, 1964. While converting the groups under the old to the sections under the new cl sification for the period prior to that date, certain adjustments had to be made. Section totals given in this table with respect to that period may not, theref agree with those given in other tables.

[1] Une nouvelle Classification des marchandises d'importation est entrée en vigueur le 1er janvier 1964. Lors de la substitution des sections de la nouvelle Classification aux groupes de l'ancienne pour la période antérieure à cette date, certains ajustements ont dû être faits. Cela explique l'écart possible entre les chiffres relatifs à cette période et les chiffres d'autres tableaux.

VALUE, PRICE AND VOLUME INDEXES OF EXPORTS AND IMPORTS

Changes in the value of exports or imports between two periods may be caused by variations in the quantity or volume of goods exported or imported, by fluctuations in the prices at which trade is transacted, or by a combination of these factors. If the general level of prices should rise between two periods this will tend to increase the value of trade in the second period even in the absence of an increase in the volume of goods bought and sold. A decline in the price level will tend to depress trade values. Similarly, quantity changes may affect trade values in the absence of price change. When prices and quantities change in the same direction they will produce very sharp value changes in that direction. Finally prices and quantities may change in opposite directions, which may cause values to increase while quantities decrease or quantities to increase while values decrease. To assess the meaning of changes in the value of trade properly it is therefore necessary to know the individual influence of price and volume movements on the value totals.

Table 31 presents a comparison of the declared (statistical) values of domestic exports and imports in current dollars and in constant dollars, together with annual indexes of the declared values, prices and physical volume of Canada's trade. Tables 32-37 present the quarterly record from 1960 to 1964 of the value, price and volume indexes published regularly in the Trade of Canada monthly reports.[1] These indexes were set up on the interim reference base 1948 = 100 and computed on that basis pending conversion to a later base period which is under study. Annual record of indexes has been published from 1926 and monthly indexes are available for July 1945 on.[2]

The indexes are computed in the following manner. The value index expresses the value of trade in a given period as a percentage of the value in the base period. The price index is of the fixed-weight aggregative (Laspeyres) type, and combines unit values calculated from the trade statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting or insufficiently homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is then derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type. The relationship between these series is thus multiplicative, not additive. The constant dollar values of Table 31 are computed by dividing the declared values by corresponding price indexes. As division by the published (Laspeyres) price indexes yields constant dollar values in which the groups do not sum to the total, a separate price index of the moving-current-weight (Paasche) type has been used in this computation.

[1] For a detailed description of these series see *Export and Import Price Indexes by Months, July, 1945 – June, 1950 (1948 = 100)*, Dominion Bureau of Statistics Reference Paper No. 8, 1950.

INDICES DE LA VALEUR, DES PRIX ET DU VOLUME DES EXPORTATIONS ET DES IMPORTATIONS

Les changements de la valeur des exportations ou des importations d'une période à l'autre tiennent soit aux variations de la quantité ou du volume des marchandises exportées ou importées, soit aux fluctuations du prix pratiqué, soit à la conjugaison de ces deux facteurs. Si le niveau général des prix augmente d'une période à l'autre, la valeur du commerce de la seconde période aura tendance à augmenter même si le volume des marchandises achetées ou vendues n'augmente pas. Si le niveau des prix baisse, la valeur du commerce aura tendance à baisser. De même, les changements de la quantité peuvent, sans que les prix changent, modifier la valeur du commerce. Lorsque les prix et les quantités évoluent dans le même sens, il en résulte de très vifs changements de valeur dans ce sens. Enfin, les prix et les quantités peuvent évoluer en sens contraire et alors les valeurs augmentent tandis que les quantités diminuent ou bien les quantités augmentent tandis que les valeurs diminuent. Pour apprécier pleinement la portée des changements de la valeur du commerce, il faut donc connaître l'effet particulier du mouvement des prix et du volume sur la valeur totale.

Le tableau 31 compare la valeur (statistique) déclarée des exportations domestiques et des importations en dollars valeur courante et en dollars valeur constante et donne les indices annuels de la valeur déclarée, des prix et du volume physique du commerce canadien. Les tableaux 32-37 donnent depuis janvier 1954 les indices mensuels de la valeur, des prix et du volume publiés régulièrement dans les rapports mensuels portant sur le commerce du Canada[1]. Ces indices ont été calculés d'après la période de base provisoire de 1948 établie à 100 et sont calculés sur cette base jusqu'à la conversion à une base plus récente, à l'étude. Une série annuelle d'indices à compter de 1926 a déjà paru et les indices mensuels à compter de juillet 1945 sont disponibles[2].

Voici comment sont établis les indices. L'indice de la valeur exprime la valeur du commerce d'une période donnée en pourcentage de la valeur de la période de base. L'indice des prix est un indice collectif à coefficient fixe (type Laspeyres) et combine les valeurs unitaires établies d'après la statistique commerciale avec certains prix de gros ou autres. Ces prix sont utilisés lorsque l'insuffisance de données quantitatives ou des articles insuffisamment homogènes dans la statistique commerciale ne permettent pas d'établir des séries de valeurs unitaires suffisamment représentatives. On obtient ensuite l'indice du volume en divisant l'indice de la valeur par l'indice des prix correspondant; l'indice du volume est donc un indice à pondération courante (type Paasche). Ces séries sont ainsi en rapport multiplicatif et non pas additif. On obtient les valeurs en dollars constants du tableau 31 en divisant les valeurs déclarées par les indices des prix correspondants. Comme la division par les indices des prix publiés (Laspeyres) donne des valeurs en dollars constants dont les groupes, si on les additionne, ne correspondent pas avec le total, on a utilisé pour établir ce calcul, un indice des prix distinct à poids courant mobile (type Paasche).

[1] Ces séries sont expliquées en détail dans *Indices des prix des exportations et des importations, par mois, juillet 1945 – juin 1950 (1948 = 100)*, Bureau fédéral de la statistique, Document de référence n° 8, 1950.

TRADE BY THE STANDARD INTERNATIONAL TRADE CLASSIFICATION[1]

Users of foreign trade statistics of more than one country have always been faced with serious difficulties arising from the limited comparability between such data, most countries having their own distinct statistical classifications of commodities. The League of Nations made an effort to solve this problem by suggesting as a basic classification its *Minimum List of Commodities for International Trade Statistics.* The League's work was resumed after the war under the direction of the United Nations Statistical Commission which, in 1950, approved the *Standard International Trade Classification.* National governments were urged to make use of the S.I.T.C., either by adopting it as a primary classification in compiling their trade statistics, or by converting national statistical data to it for international use. Canadian trade statistics are now converted to the S.I.T.C. and current data are published, along with the statistics of several other countries, in the United Nations *Commodity Trade Statistics* series.[2]

Statistics showing Canadian trade during the calendar years 1960 to 1964 on the basis of the S.I.T.C. are presented in the following three tables (38 to 40), with respect to trade with all countries, with the United Kingdom, and with the United States. It should be noted that in these tables exports mean total exports (domestic plus re-exports) and that totals of imports differ from those appearing in other tables of this report by the exclusion of foreign coin, except gold, and repairs on ships and vessels.

The keys for converting Canada's export and import commodity statistics to the S.I.T.C. have been revised since the publication of the first indexed edition of the S.I.T.C. in April, 1953. The data for 1960 to 1964 appearing in Tables 38 to 40 were compiled according to the revised keys, and therefore do not compare exactly with figures published in this table prior to 1953. The data have been compiled on the basis of the S.I.T.C. Revised (1961).

COMMERCE SELON LA CLASSIFICATION TYPE POUR LE COMMERCE INTERNATIONAL[1]

La statistique du commerce extérieur de plus d'un pays a toujours présenté à ses utilisateurs de graves difficultés en raison de la comparabilité limitée des données, la plupart des pays ayant leur propre classification des marchandises. La Société des Nations, cherchant à résoudre le problème, avait proposé comme classification de base sa *Liste minimum de marchandises pour la statistique du commerce international.* Le travail de la Société a été repris après la guerre sous la direction de la Commission de statistique de l'Organisation des Nations Unies qui, en 1950, approuva la *Classification type pour le commerce international.* Les gouvernements nationaux furent priés de se servir de la C.T.C.I., soit comme classification de base dans l'établissement de leur statistique du commerce, soit en modifiant la présentation de leur statistique conformément à la nouvelle classification. Le Canada a déjà adapté sa statistique du commerce à la C.T.C.I., et les données courantes de même que celles de plusieurs autres pays sont publiées dans le bulletin des Nations Unies *Commodity Trade Statistics*[2].

Les statistiques du commerce canadien pour les années civiles 1960 à 1964, fondées sur la C.T.C.I., figurent aux trois tableaux qui suivent (38 à 40) et analysent le commerce du Canada avec tous les pays, avec le Royaume-Uni et avec les États-Unis. On notera que dans ces tableaux le terme "exportations" représente le total des exportations (exportations nationales et réexportations) et que les totaux des importations diffèrent de ceux d'autres tableaux du présent rapport par suite de l'exclusion de la monnaie étrangère, sauf l'or, et des réparations de navires et de vaisseaux.

Les explications sur la façon de ramener la statistique des exportations et des importations de marchandises du Canada à la C.T.C.I. ont été revisées depuis la publication de la première édition indexée de cette classification, en avril 1953. Les données pour 1960 à 1964 qui paraissent au tableau 38 à 40 ont été calculées d'après cette revision et, en conséquence, ne sont pas rigoureusement comparables aux chiffres du même tableau publiés avant 1953. Les données sont établies sur la base de la C.T.C.I., édition revisée (1961).

[1] Les dispositions de la loi sur la statistique ne permettent pas d'inclure les exportations de caoutchouc synthétique dans le groupe 231. Elles sont comprises dans le groupe 599.

[2] Ne comprend pas le numéraire étranger, sauf l'or.

IMPORTS FROM CENTRAL AND SOUTH AMERICA

Until the middle of 1946, all imports were credited in Canadian trade statistics to the countries from which the goods were consigned to Canada. But beginning in July, 1946, a new method was adopted for crediting goods produced in Central or South America (including Bermuda and the West Indies) but consigned to Canada from the United States (and usually purchased in that country). This was to credit such shipments to the country in which the goods were originally produced.

At the time when this change was made its effect on Canadian trade statistics was minor. Under immediate post-war trading conditions almost all shipments of Central and South American goods were consigned to Canada from the country in which the goods were produced. With the return of more normal trading conditions a much greater proportion of these countries' goods has since come to be consigned to Canada from entrepôt markets in the United States.

A survey was begun in 1953 to determine the amount of imports credited to Central or South American countries which was actually consigned to Canada from the United States. Table 41 shows Canadian imports consigned from the country credited as well as those consigned from the United States but originating in a Central or South American country.

IMPORTATIONS DE L'AMÉRIQUE CENTRALE ET DE L'AMÉRIQUE DU SUD

Jusqu'au milieu de 1946, toutes les importations du Canada étaient attribuées dans la statistique du commerce du Canada aux pays d'où les marchandises étaient expédiées au Canada. A compter de juillet 1946, cependant, une nouvelle méthode a été adoptée à l'égard des marchandises produites dans l'Amérique centrale ou l'Amérique du Sud (y compris les Bermudes et les Antilles), mais expédiées des États-Unis au Canada (et habituellement achetées aux États-Unis), afin de les attribuer au pays où elles étaient originairement produites.

A l'époque où le changement a été opéré, la statistique du commerce du Canada s'en est peu ressentie. Au lendemain de la guerre alors que régnaient des conditions commerciales bien particulières, presque tous les envois de marchandises de l'Amérique centrale et de l'Amérique du Sud étaient expédiés au Canada à partir du pays même où elles étaient produites. Depuis le retour de conditions plus normales, une proportion beaucoup plus grande des marchandises de ces pays sont expédiées au Canada à partir des marchés américains où elles sont entreposées.

On a commencé un relevé en 1953 afin de déterminer le chiffre des importations attribuées aux pays de l'Amérique centrale ou de l'Amérique du Sud qui étaient en fait expédiées des États-Unis au Canada. Le tableau 41 donne les importations canadiennes expédiées du pays auxquelles elles sont attribuées de même que les importations expédiées des États-Unis mais provenant des pays de l'Amérique centrale ou de l'Amérique du Sud.
